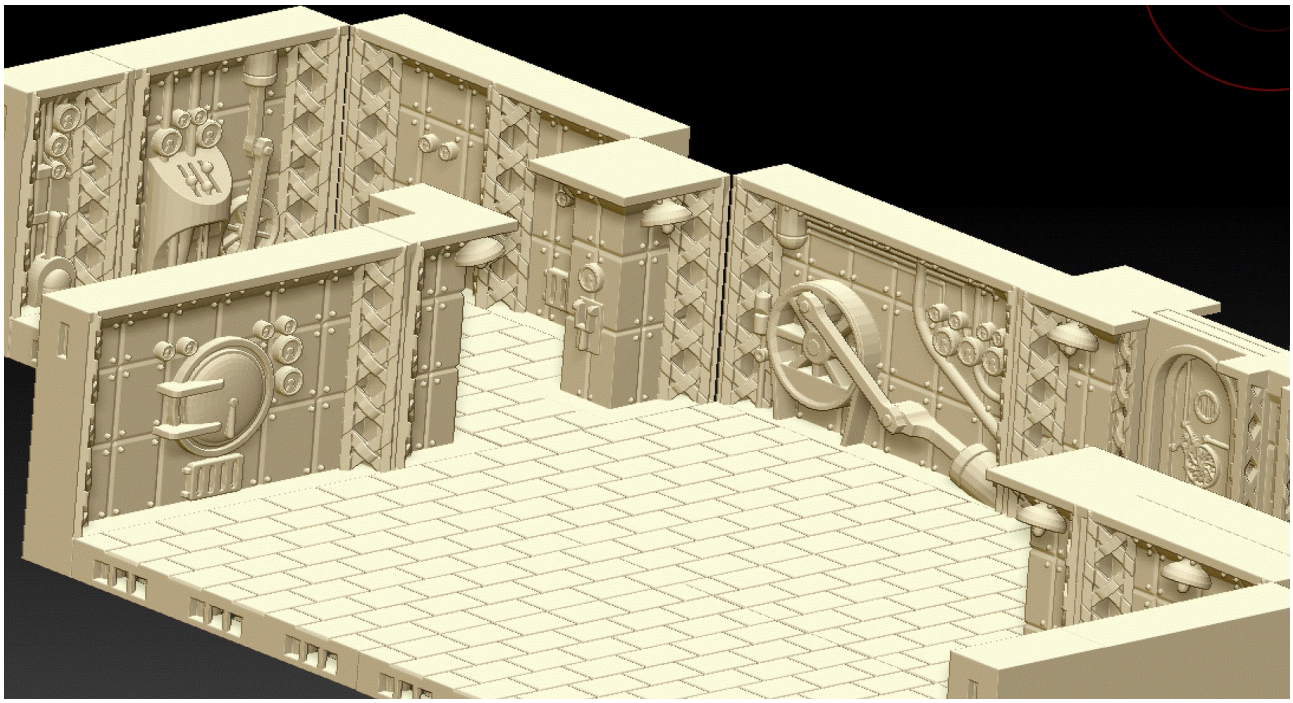
Future Worlds

Steampunk Modular Scenery



OpenLOCK® Compatible

Arid Hills Gaming

Welcome to our Future Worlds 3D printable product line and thank you for buying this product. We aim to provide you with high quality and low cost .STL files which you can use to make your own war gaming, skirmish, RPG and general tabletop gaming scenery.

In order to help you get the most out of our models there are some things that we would recommend:

- ALWAYS use a raft for these models – the bases are flat however a raft provides better adhesion and reduces the chance of failed prints.

- Always use support structures – there are overhangs on most models. Although it is possible to print without support structures the chance of failure is significantly higher and the finished model will not be as defined on the undersides. Most of these models have overhangs and support structures will really help with quality

- Don't print a solid model – use an internal honeycomb structure to reduce the amount of filament you use while maintaining good strength.

- Finally, a lot of these wall sections can be printed lying flat on their back. If you do want to print without support structures, I suggest that you at least consider doing the same.

Files in this product:

- Steampunk Corner 90 Degree.stl
- Steampunk Corner 180 Degree.stl
- Steampunk Corner Inside 90 Degree.stl
- Steampunk Door 1 inch.stl
- Steampunk Door 2 Inch.stl
