ASSEMBLY INSTRUCTIONS

To create this model, you will need at most 12 sheets of cardstock (100# cardstock recommended), scissors, a hobby knife and glue. Print one copy onto cardstock. Follow the trimming guides on the following pages. You will probably find that some of the fold-and-glue tabs exceed the printable area of your paper. That's okay. Just follow the trimming guides and you will find it easy to cut the tabs even without a printed line.

When using the trimming guide: ***Cut* along the black lines with scissors or a hobby knife.** *Score* with a hobby knife and *fold back* along the red lines. *Score on the back of the sheet* and *fold forward* along the green lines.

Starting with the largest sections, glue along the tabs and fit the pieces together using the image as your guide. For the roofs, fold the tabs all the way under and glue flat, then glue the roof to the tabs at the tops of the wall sections. Optionally, you can finish this model by using a fine-line black marker to fill in the white edges.

PRINTING TIPS

To print this model, you'll need to print the four separate PDFs included in the ZIP folder. First, print "part-1.pdf". This section has no special features and you may print it as it is. For the remaining parts (2, 3 and 4) you have some additional details available, such as eagle insignia and legal writs pasted on the walls, or . Choose your favorite details before printing. (See below for notes about how to use the additional texture layers.) If you choose balcony layers for parts 2 or 3, be sure to print the "part-5-optional-balconies.pdf" and be sure to check the balcony file for extra image layers!

These files are set up for the standard 28mm-30mm tabletop wargaming scale, and for US letter-sized (8.5" x 11") sheets. Turn off any 'fit to page' options in your printer driver. If you are printing on A4-sized sheets, you may want to reduce the print size to 95% of the original. Do this consistently when printing these files.

Print on heavy cardstock whenever possible. You can create super-sturdy models by printing on plain paper and then gluing this to a heavy bristol board before cutting.

USING THE TEXTURE LAYERS

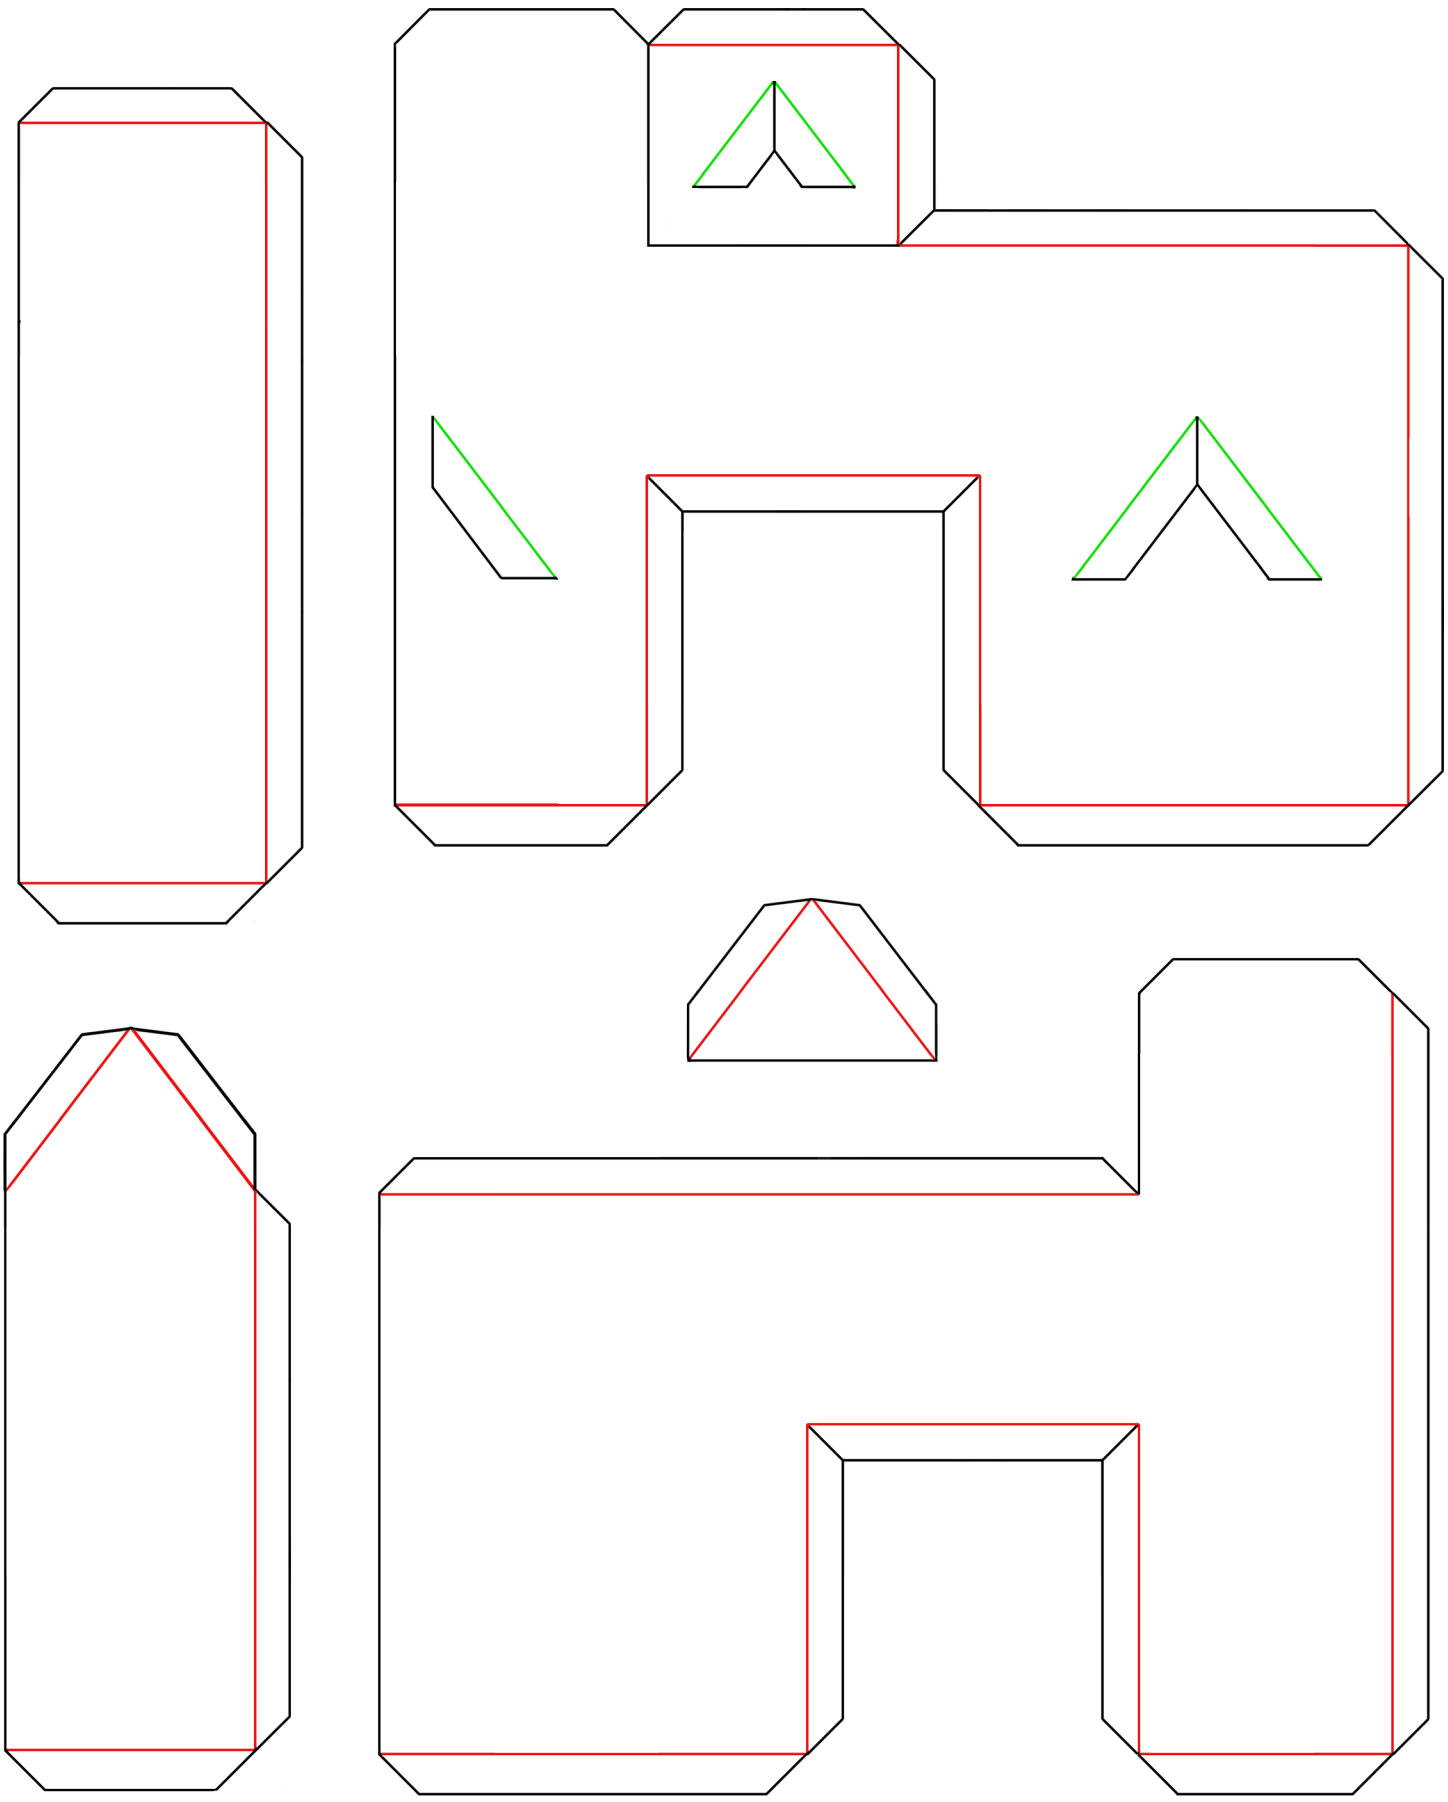

These PDF files contain additional image layers that you can make visible or invisible. When you open a file containing extra layers, you'll see the default design. To make changes, open the Layers palette and expand the file name to reveal the selection of layers. Some of them will be visible; others will be invisible. Click on the 'eye' icon to change a layer's visibility. When you're happy with your design, just print it off.

DIFFERENT SCALES

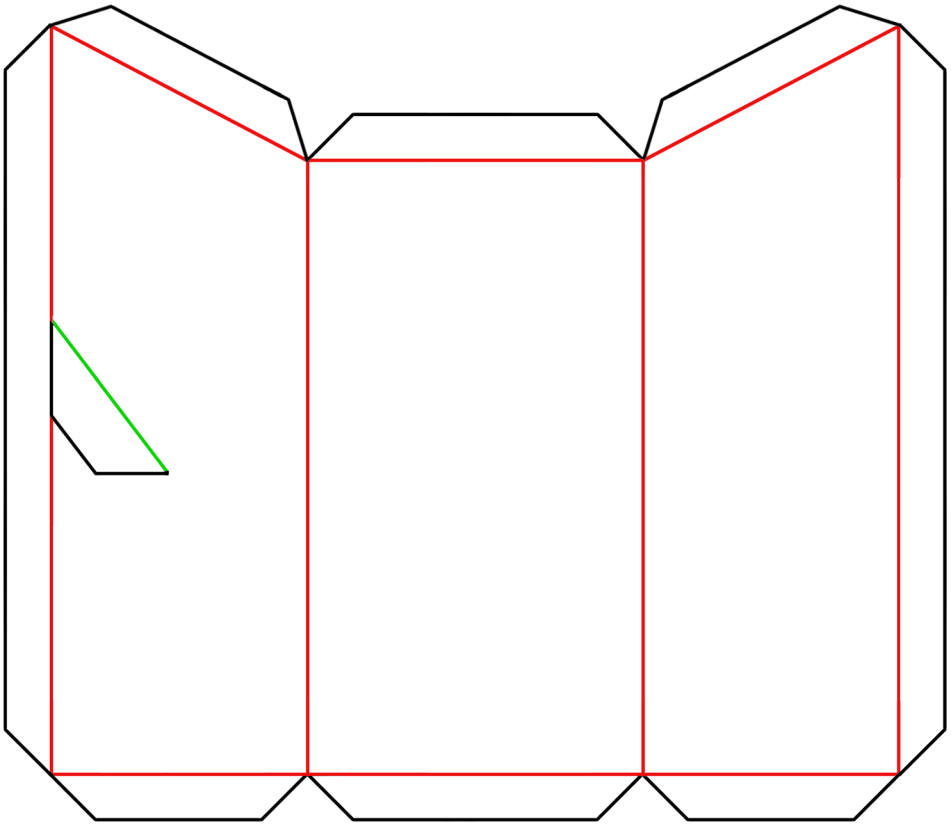

To print at a smaller scale, use the table below and change your print size percentage.

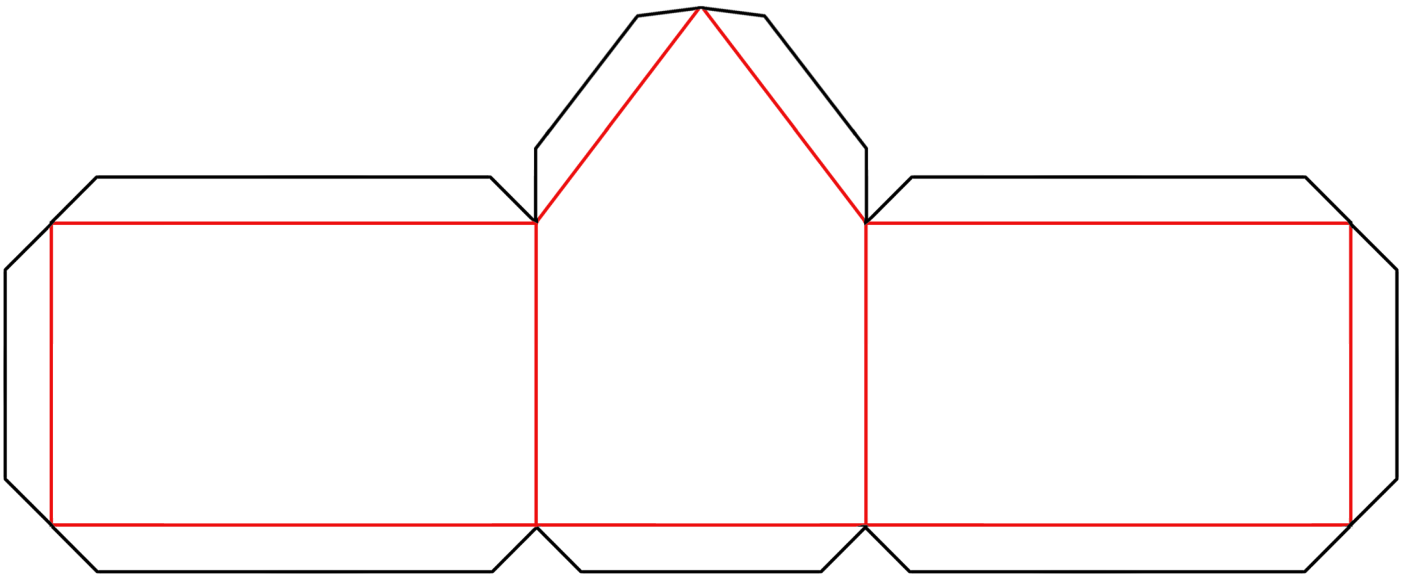

Scale	%
25mm	84%
20mm	65%
18mm (HO)	60%
15mm	50%
12mm	40%
10mm (N)	34%
8mm	27%
(Z)	23%
6mm	20%
