FURNISHING

City of Tarok
3D PRINTABLES

MINIATURE SET
by Antal Kéninger

Black Scrolls Games

City of Tarok: Furnishing

You can resize the files if you want a smaller (or larger) sized items in your game, these files are good to 28-32mm sized miniatures without changes.

You do not need any support material to print these models, you can turn off that setting in your printer.

We have printed the parts at 0.1 mm layer height, 32 percent infill and 210C with eSun PLA+, using a 0.4 mm nozzle. We used the 4.0 version of Cura as a slicer and the miniature profile of Fat Dragon Games. You'll find it in their Facebook Group: https://www.facebook.com/groups/528423924186756/permalink/921905368171941/
You'll find more in their group among the files if you are interested in later releases.

If you have any questions, please feel free to contact us on Facebook or any other platform where you can find us. :) You'll find the links below.

These files are for personal use only, making any changes to the files, selling them or the printed result is possible only with the written permission of the publisher. If you are interested in reseller rights of the printed model please visit our Patreon page for more info. Thank you!

Resizing the files:

You can resize the files if you want to print the building in another scale. They will work at 100% with 28mm figures and games.

These are the recommended settings to get other sizes:

140% - 40mm
115% - 32mm - heroic sized miniatures
100% - 28mm - standard RPG miniatures with one inch base
54% - 15mm - most boardgame items (Joan of Arc) and wargames
36% - 10mm - for wargaming
22% - 6mm - for wargaming

You can use these numbers in your slicer before printing.

Content:

You can see several folders/ZIP files next to this PDF file.

The folders containing more files within them based on their names. The merged versions and the not filled chairs require supports that you should turn on in the slicer you are using.

You'll find pictures in every folder with the content.

We got these small led balls to the working stand-alone fireplace from Amazon, here are some links if you would like to use the same:
