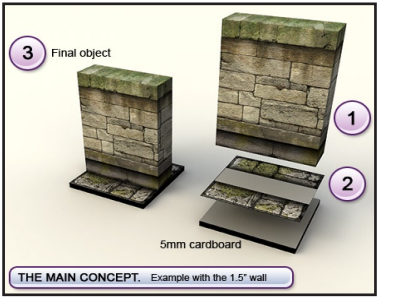
HOW TO BUILD YOUR FIRST MODEL

1. Print the 1.5” wall on card stock, personally I use 224gr. card stock. Cut the wall, then fold it and glue the tabs.

2. Glue the floor on the 5mm cardboard (you can paint the 4 sides in black for a better look). This is the “base” floor for your model.

3. Then glue the model on the base, (as you can see on the picture, each walls comes with his own floor with a precise marquee for gluing it whitout errors and perfect tiling).

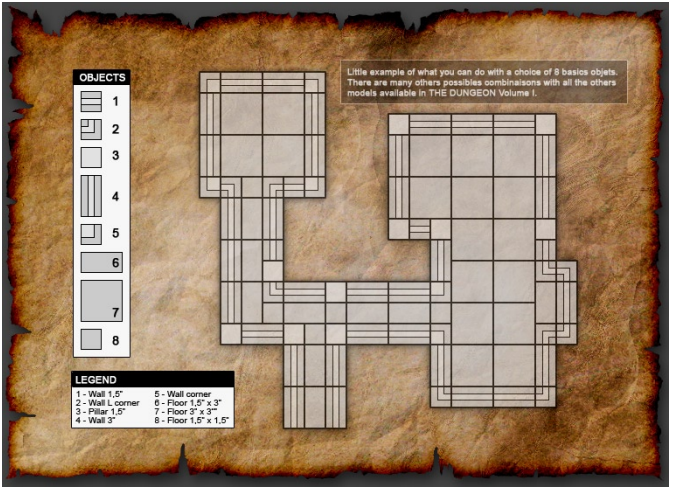


Build your model in 3 steps.

That’s it, your first model is finished...

This is the same concept for all the walls, corners and curved walls. Some objects doesn’t have floors, like crates, chests or stairs. Just drop them on the floor.

HOW TO BUILD THE DUNGEON ROOMS?
Easy, you have a exemple on the next picture. Simply put your models on the table and make the design you want.
You can connect each part of your dungeon with little or big corridors.



Example of dungeon design.

Well, as you can see the concept is very simple and most of the objects are just simple boxes for a fast & easy folding.

I you have questions or remarks : http://www.stones-edges.com , Happy folding !!!
