SHORT AND LONG CORRIDORS

Difficulty Rating (Out of 10): 4

Recommended Duplications: 4-6 of each (These long and short corridor straight-aways are an essential part of this dungeon creation system. These sections serve another purpose, which is to define the various rooms throughout your dungeon. The more you build the more expansive your dungeon will be. Thankfully they are relatively easy to build.)

Steps:

- Cut and score where marked. Take note of the reverse side scoring along the base of the corridor section.
- Fold along your scores.
- Glue the beige tabs (glue tabs) to the inside of the corridor walls. IMPORTANT: As with most of the models in this set it is important that you use the Wooden Ruler Technique as noted in the beginners guide. It is impossible to get a good bond with your fingers alone on this model due to the angle. When done properly the walls should form a sturdy triangular, self-supporting shape.
