CROSSROAD INTERCHANGE

Difficulty Rating (Out of 10): 6 (The most difficult thing about this model is the amount of time it takes to construct the corner wall joints. Once you get an assembly line of sorts going it moves a lot faster.)

Recommended Duplications: 2-4 (You will need at least two interchanges to give you the freedom to create a wide variety of dungeon crawls)

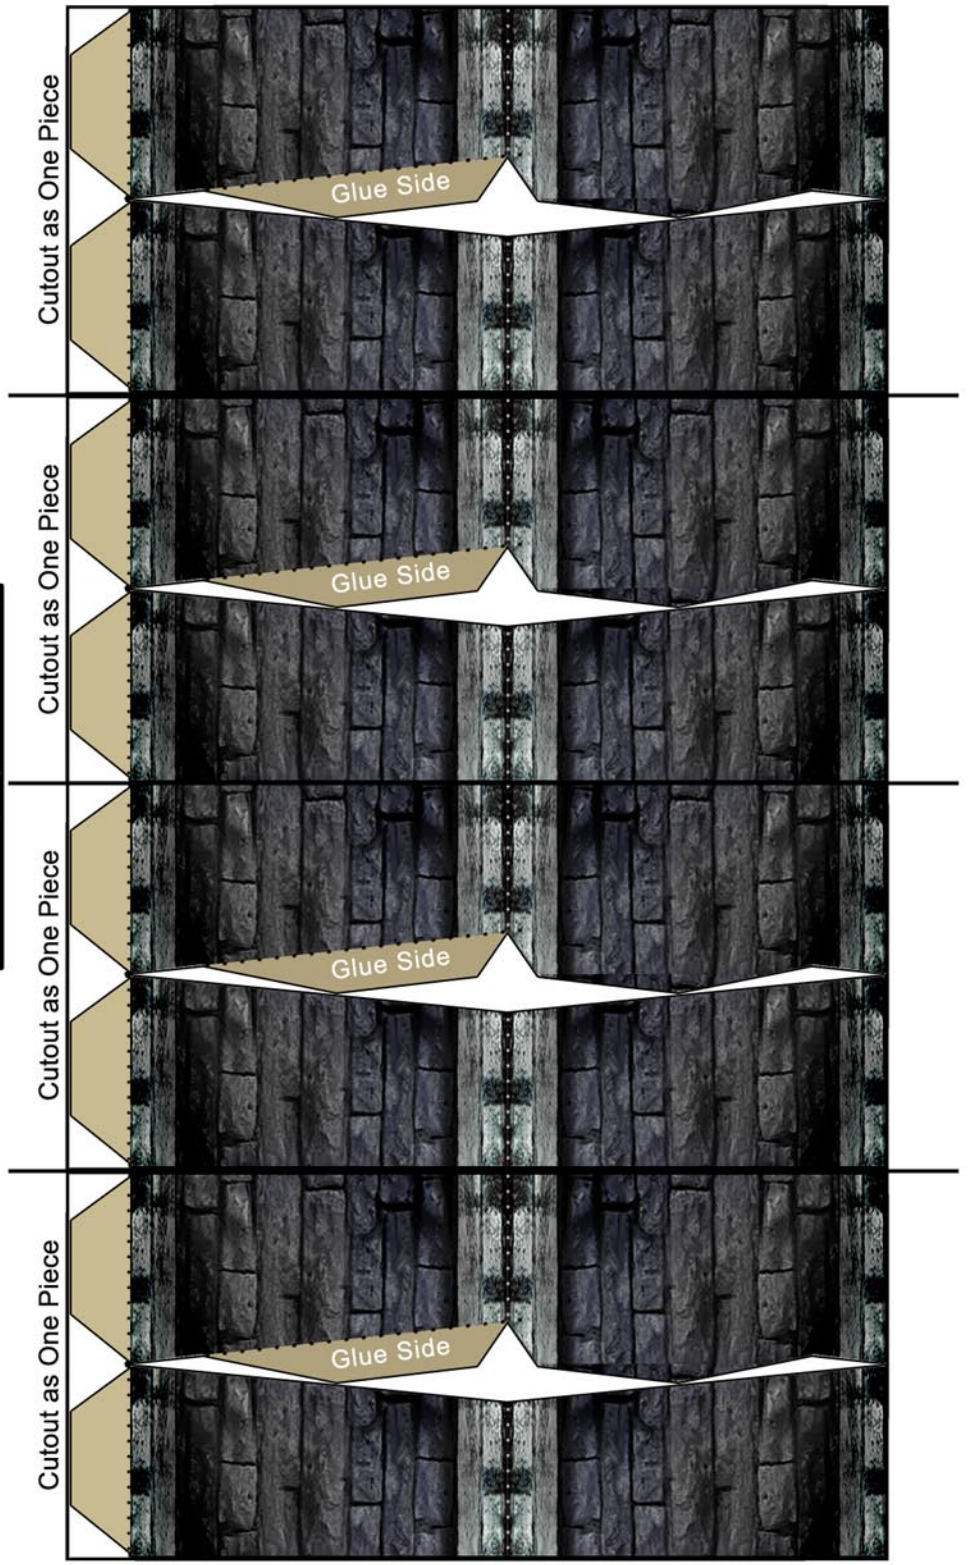

Steps:

- Cut and score where marked. Remove the model sections marked fold as one piece and fold along the score line AS ONE PIECE creating a sandwich. Be sure that the fold is lined up properly and that no white space is sticking out on either side.
- Once you are sure of your alignment glue the two halves together and let dry for two minutes. Once dry you may now cut the remaining white space out of the model. You should wind up with to separate halves. Fold where you have previously scored and set to the side. When placed together these halves will form the inside corner wall joints for this corridor piece. Repeat this process with the other three corner wall joints. In the end you should have 8 wall pieces. Four without flaps and four with.
- Take the four flapless pieces you set aside earlier and separate them from the others. These pieces should have one side with a straight vertical and the other with a slight angle. Start by gluing this sections tab to the underside of one of the inner notches of the interchange. It is important that the straight vertical edge of the wall is facing outward and the angle is facing inward. Rotate the interchange and repeat the process with the remaining wall sections.
- Take the final piece with the flap and glue its tab to the underside of the remaining inner notch. You should be left with two floppy walls. Glue the remaining tab to the

outside of the flapless piece. When done properly you should have a slightly angled inner corner section. This angle should sweep outward. Repeat this process with the remaining three sections.

This model is more difficult to explain than it is to actually build so don t get too caught up in the explanation. The pieces only work one way! Just go for it! If all else fails refer to the above photos for a better sense of the models construction.
