FLOATING WALLS

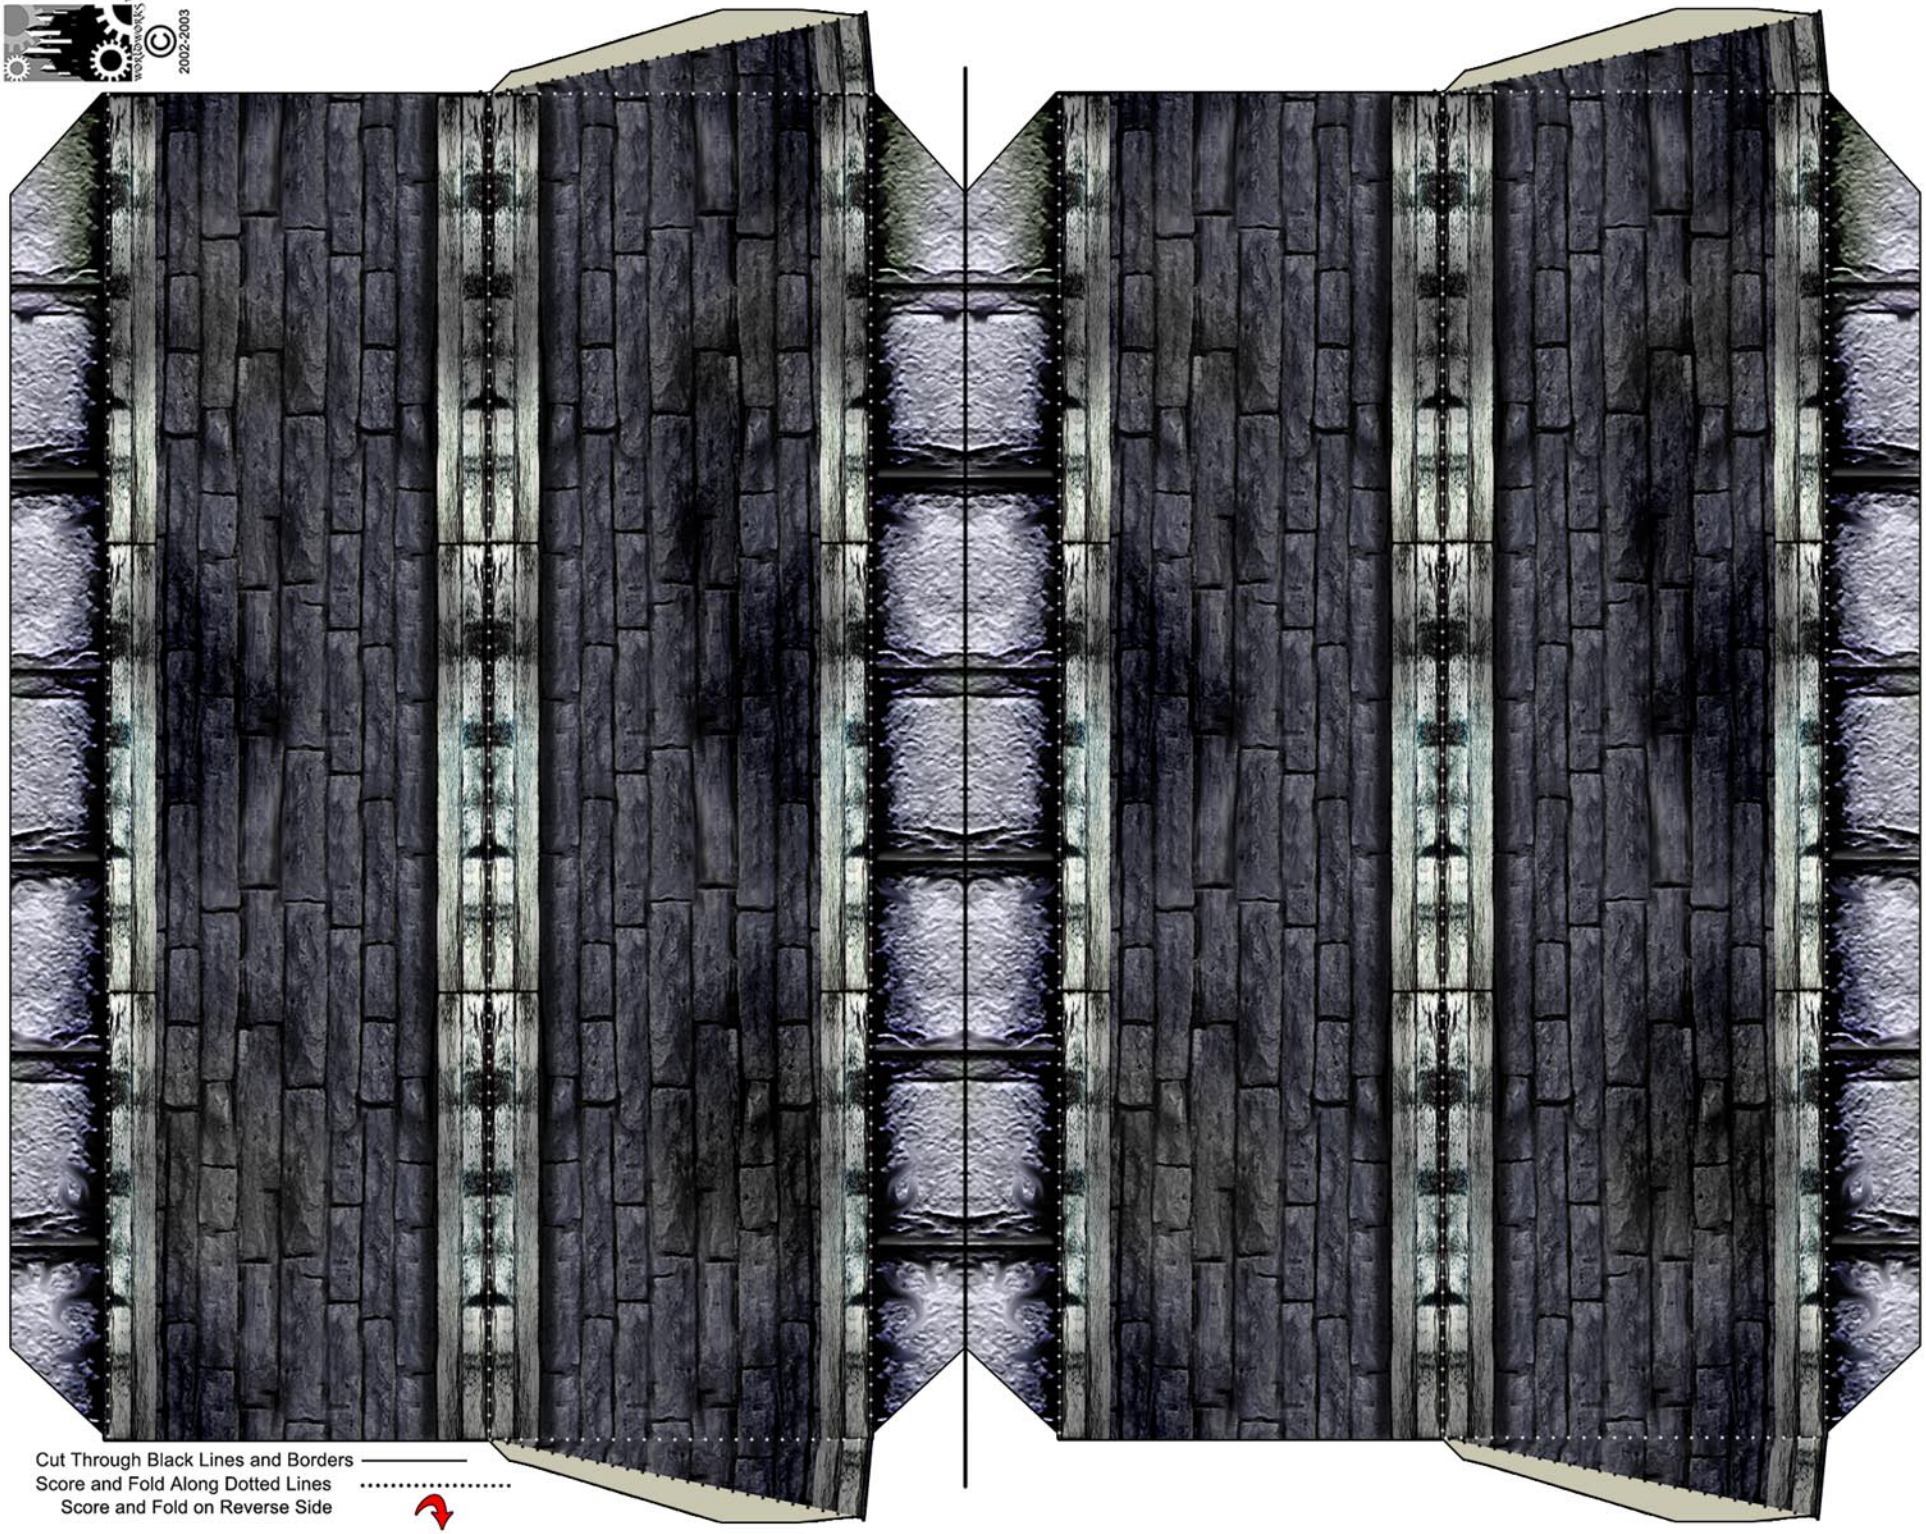

Difficulty Rating (Out of 10): 4 (The floating wall is a simple variation on the "corridor straight away". These walls are separate and free standing)

Recommended Duplications: 2-4 (These floating walls are designed to fill any gaps you may have or to divide a room in a unique way. For most designs you will not need floating walls but there is the occasion when they are useful. Print as needed)

Steps:

- Cut along black border. Be sure to cut straight through the dominant black line separating the models. There are 2 floating walls on one sheet.
- Score your models where noted. Pay careful attention to the reverse side scores at the base of the model.
- Fold where scored
- Glue the beige tabs (glue tabs) to the inside of the corridor walls. IMPORTANT: As with most of the models in this set it is important that you use the Wooden Ruler Technique as noted in the beginners guide. It is impossible to get a good bond with your fingers alone on this model. When done properly the walls should form a sturdy triangular, self-supporting shape.
