RISERS

Difficulty Rating (Out of 10): 3

Recommended Duplications: ? (The amount of large and small risers you wish to construct really depends on what form your dungeon will take. These models can be used as risers for multi-leveled dungeon design or as generic building blocks for columns, stairs, and or whatever unusual architecture you can come up with. Print as needed)

Steps:

- Cut and score where marked. Cut straight through black lines to separate individual models.
- Fold along score lines.
- Glue the beige glue tabs to the inside of the model walls.

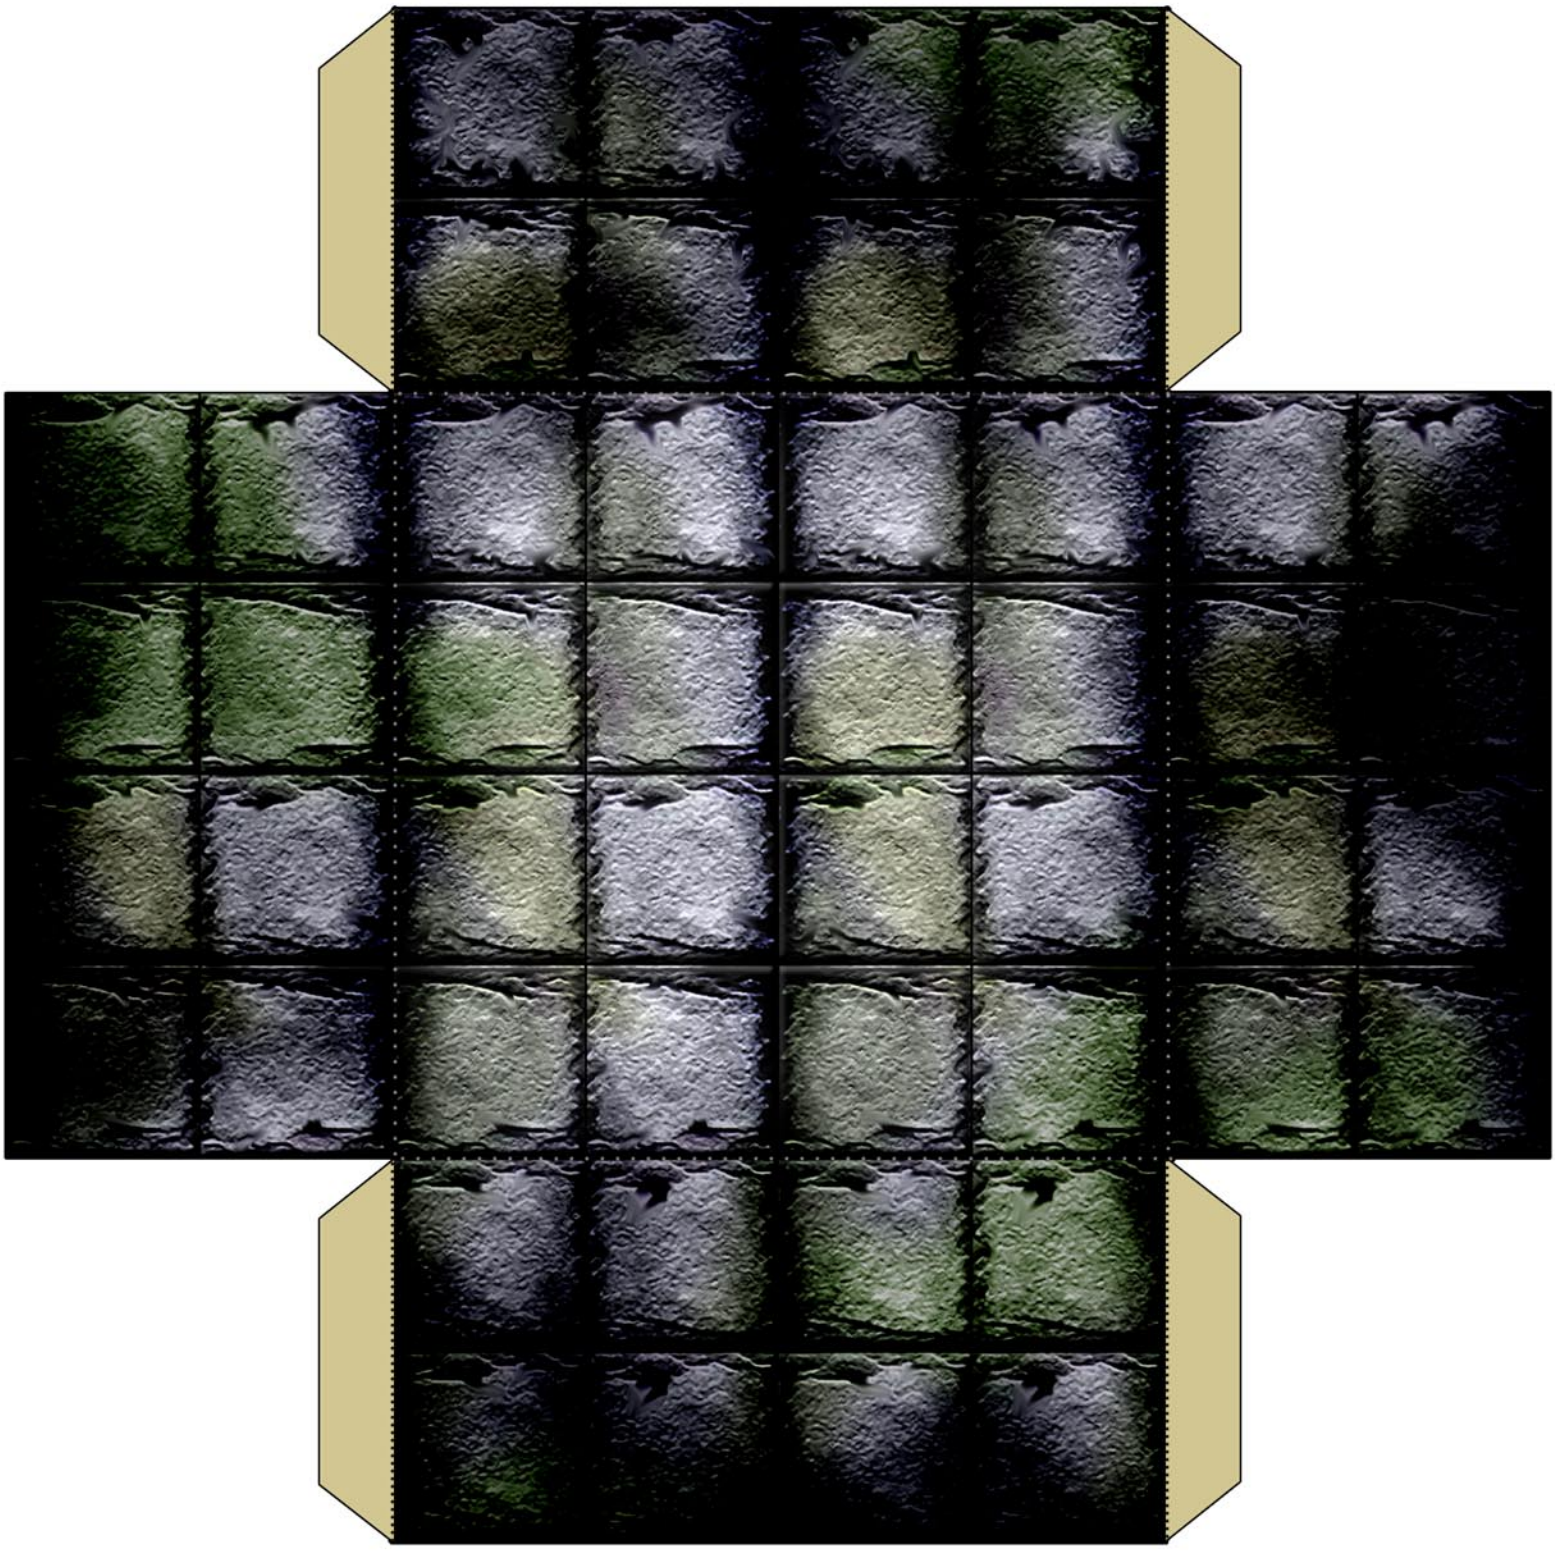

As always, if you're confused by the construction refer to the above photos.
