City of Tarok
3D Printables

Modular
Watchtower
Miniature Set

by Antal Kéninger

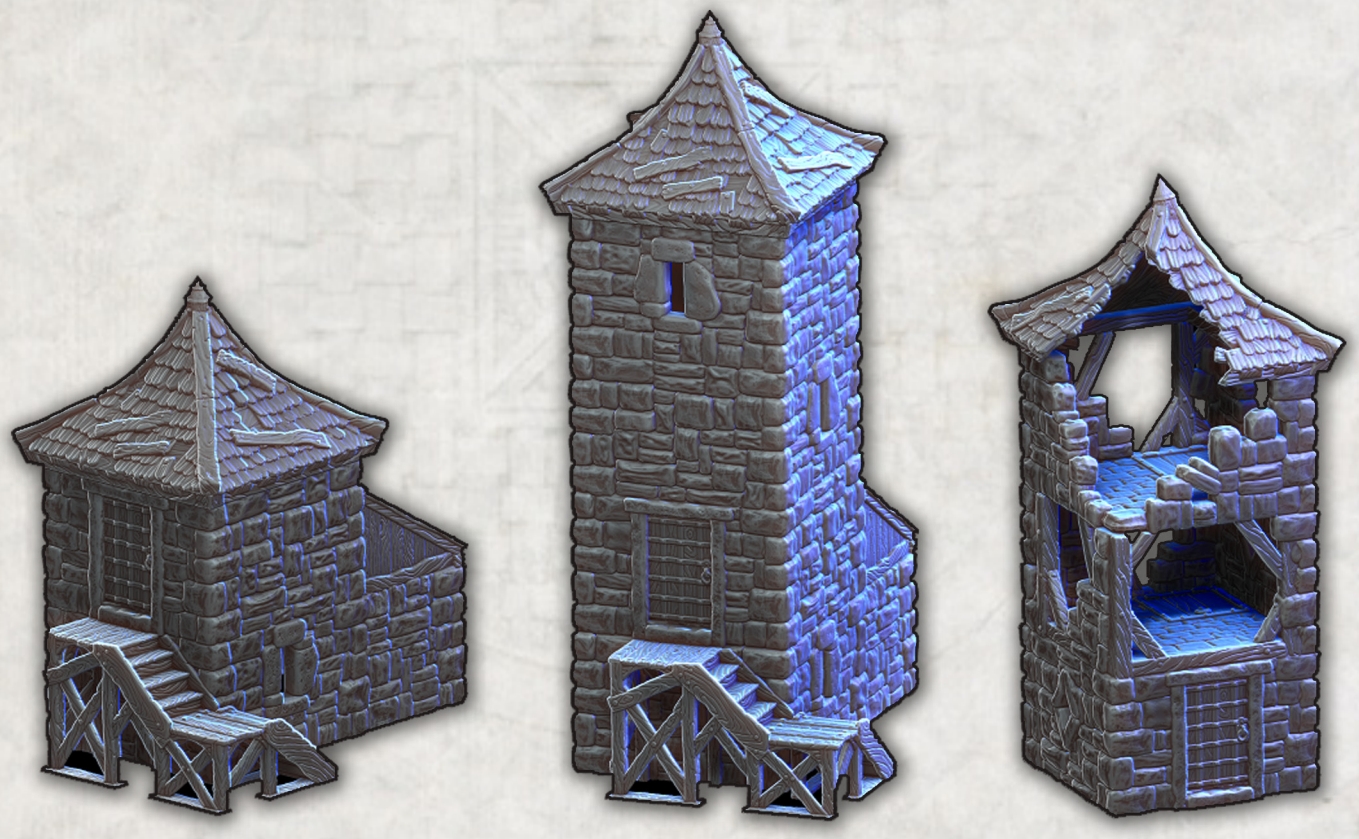

City of Tarok: Watchtower

You can resize the files if you want a smaller (or larger) sized miniatures in your game, these files are good to 28-32mm sized miniatures without changes.
One level will be 2 inches (5 cm) tall, the base is 3x3 inches (8x8cm).
You do not need any support material to print this model, you can turn off that setting in your printer.

We have printed this model at 0.16 mm layer height, 10 percent infill and 210C with eSun PLA+, using a 0.4 mm nozzle. We used the 4.0 version of Cura as a slicer, we attached our cura profile for Ender 3/5 pritners. You'll find our setting in the Cura folder. These numbers may vary based on your printer and the material you use.

If you have any questions, please feel free to contact us on Facebook or any other platform where you can find us. :) You'll find the links below.

These files are for personal use only, making any changes to the files, selling them or the printed result is possible only with the written permission of the publisher. If you are interested in reseller rights of the printed model please visit our Patreon page for more info. Thank you!

Resizing the files:

You can resize the files if you want to print the building in another scale. They will work at 100% with 28mm figures and games.

These are the recommended settings to get other sizes:

140% - 40mm
115% - 32mm - heroic sized miniatures
100% - 28mm - standard RPG miniatures with one inch base
54% - 15mm - most boardgame items (Joan of Arc) and wargames
36% - 10mm - for wargaming
22% - 6mm - for wargaming

You can use these numbers in your slicer before printing.

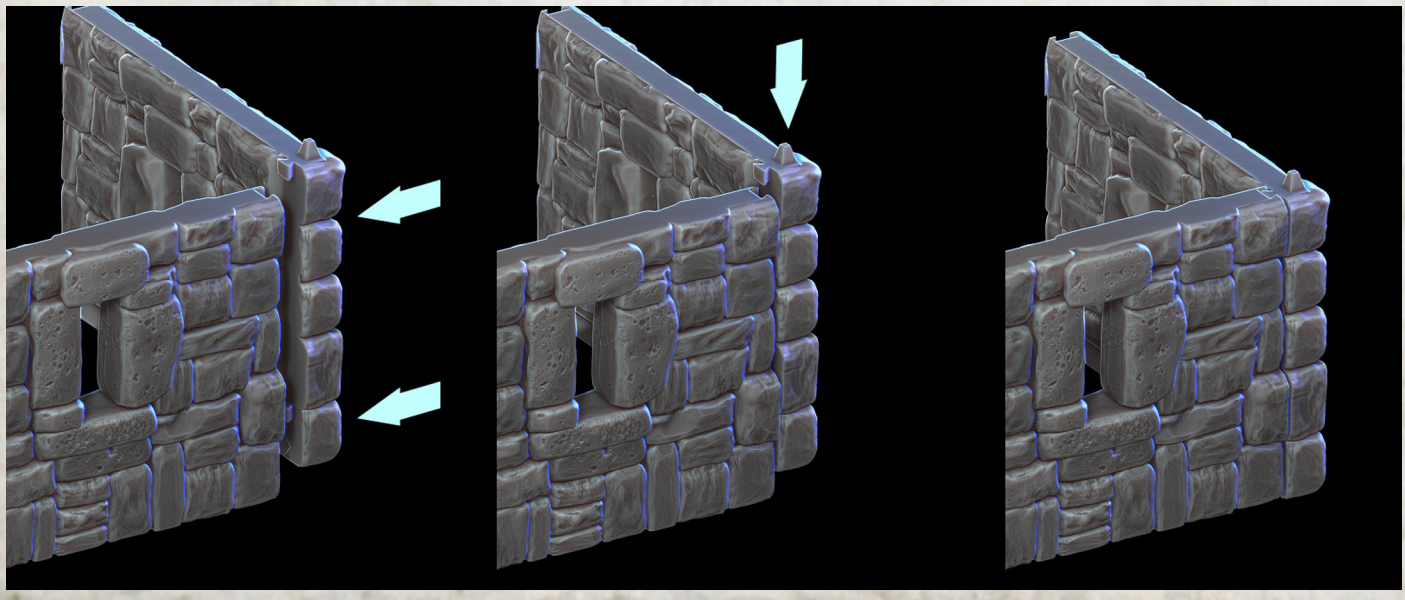

Content:

You can see several folders/ZIP files next to this PDF file. The content of the **„modular wall"** is what you need if you want to print the model in pieces at a 28mm scale and you would like to change the walls individually. You'll find the roofs, stairs, and floors in the **„roofs_walls_stairs"** ZIP file. You'll need this even if you want to print the tower **merged by levels**, as the inner stairs and the rooftops will be in these folders. The **„merged by levels"** folder will contain some merged variations which will let you build a partially modular tower, where the levels are interchangeable.

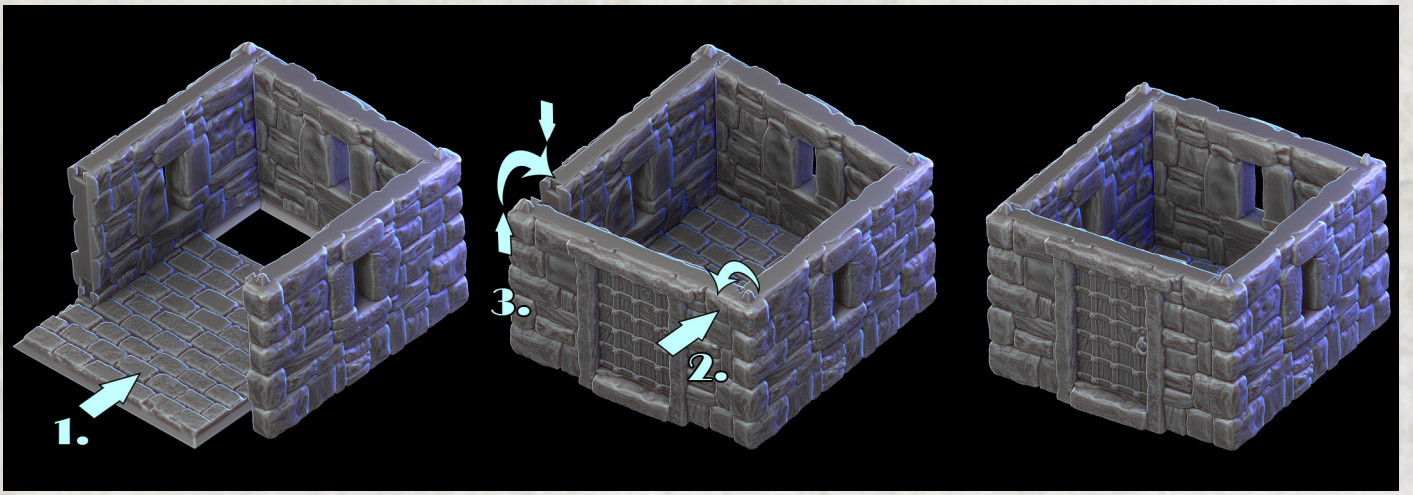

The **„All merged„** folder contains the whole model in ten variants. (You need slicer support to print the ruined versions.)

You'll find pictures in every folder with the content and some suggestions/reference how to use the files.

If you print the tower in pieces you can snap the parts together easily using any of the wall pieces, four of them, and a floor tile. It is easier if you do that while the pieces are standing on your table.

When you are done with three walls insert the base you need, then snap one side of the fourth wall, then the other half of it to the remaining wall. And you'll get one level of your tower. It will be easier to do it on your table and not while keeping it in your hands.

Parts of the Dice Tower base:
