these maps for personal, non-profit, use.

This document contains the deckplans for the dome and all three variants of the Atlas-class transport. They can be printed out, trimmed, and placed (with some overlap) to map out the habitable locations of the vessel. This file was constructed using layers to allow for some customization of display. The layers are:

- Optional cargo.
- Grid: 1 inch grid, with each square representing about 5 feet.
- Black & White version of the primary map elements.
- Ship: an exterior view of the ship under the map.
- Background image with the primary map elements.

The images on the following four pages show how the map pages are laid out for the dome, Europa, Meridian, and Pangea variants.

The upper dome section of an Atlas takes 14 pages to map out. This is 1 page for the Bridge, 4 pages for the Support Deck, and 9 pages for the Crew Deck.

Each lower section (Europa freighter, Meridian dropship, or Pangea passenger transport) requires 13 more pages. This is 9 pages for the upper level(s) and 4 for the lower level(s).

Note that all of these maps are rotated 90 degrees counter-clockwise so that the “front” of the ship is to the left in this document. This was done so that more useful features (like the escape pods on the bridge) would be visible on the printed pages.

To represent any given variant print out the dome and then the corresponding section of this document, keeping in mind that the Meridian dropship also has a Cargo Deck - maps for which are found in the Europa section.
