MisFortune

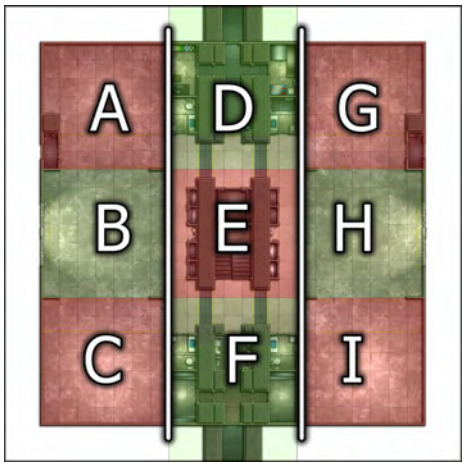
This document contains the maps for the container ship *MisFortune*. The ship has six decks throughout most of its length, with three additional small decks (7, 8, and 9) above the central stack. This is the Command Tower, which has the crane operation stations, bridge, and landing pad access locks.

The maps are arranged from bottom (deck 1) to top (deck 9) according to which part of the ship they belong:

- Bow Area
- Aft Engineering
- Spine Area
- Command Tower
- Central Stack

Many of these pages, especially in the Spine, are used multiple times within MisFortune. Due to space limitations, each is only printed once within this document.

The Ajax-class cargo transport uses all map pages from the Bow, Aft, and Spine areas, plus a single custom page from the Command Tower. Maps for the Sherpa-class freight hauler can be found within a separate document.



The Central Stack area is comprised of six decks, each of which is mapped in a 3x3 arrangement of pages. The letter codes used to identify these pages are shown above. For other areas, **A** is generally towards the front of the area while **B** and **C** are further back.

In addition to the broad overview on the following page, the *MisFortune Section Maps* document provides a closer look, and map legend, for each area.

Spine Area

The image to the right shows one complete container deck. There are six such decks on the ship. The area between the green lines is what you get from printing out a single set of the pages found in this section. To reproduce one whole deck, you would need six copies of the pages here, plus a seventh copy of the final three pages. The first and last row of containers would have to be trimmed slightly to remove the overlapping section (because there are bulkheads there rather than another row of cargo containers).

While empty cargo containers are used in these maps, the actual ship can have any variety of HMT 337 container in any of these locations – or a location may be empty. The Sherpa document has interior maps for the other container types. They can be laid over the cargo containers as needed.
