# RAVENFELL: ITEMS & STREETS

Before proceeding with this document, make sure you have read the beginners guide to card modeling included with this model set. Also, review all of your layer options before printing, there are several ways you can design your tower!

All miniatures shown in this document are by ***REAPER MINIATURES***

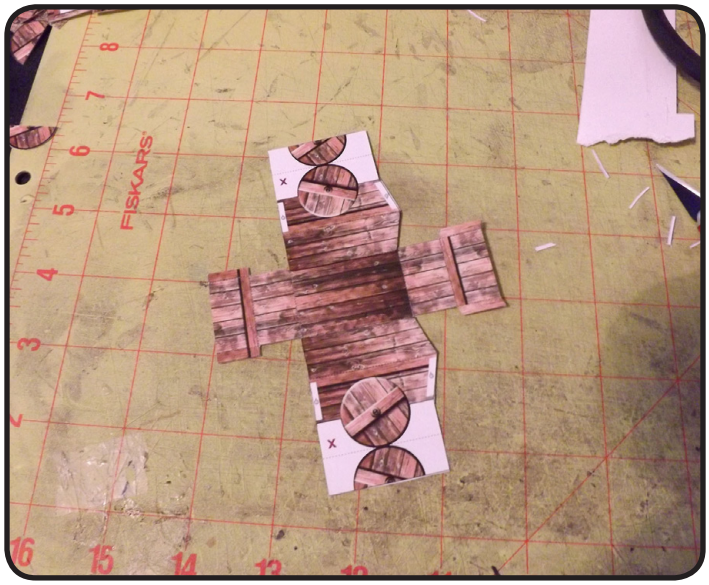
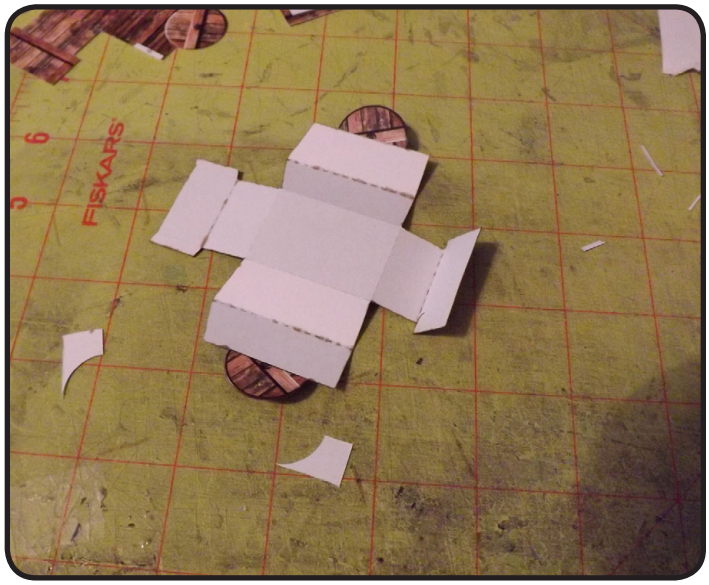
Permission granted to print this document and all related model files for personal use.

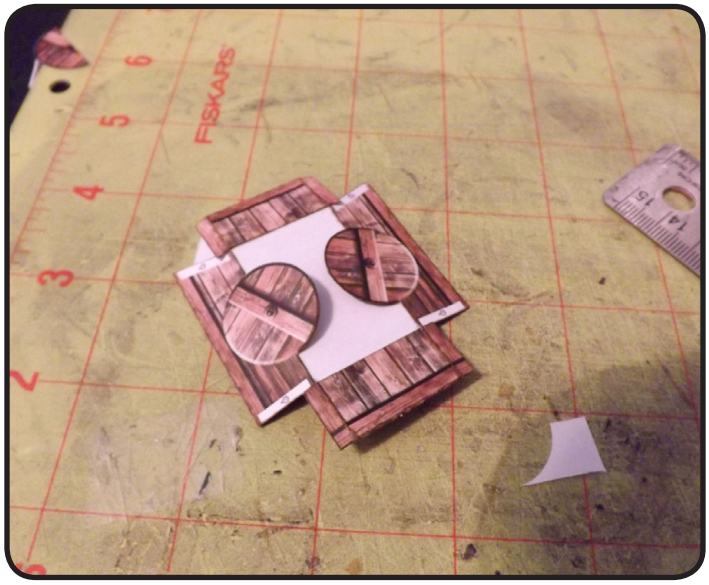
# CART



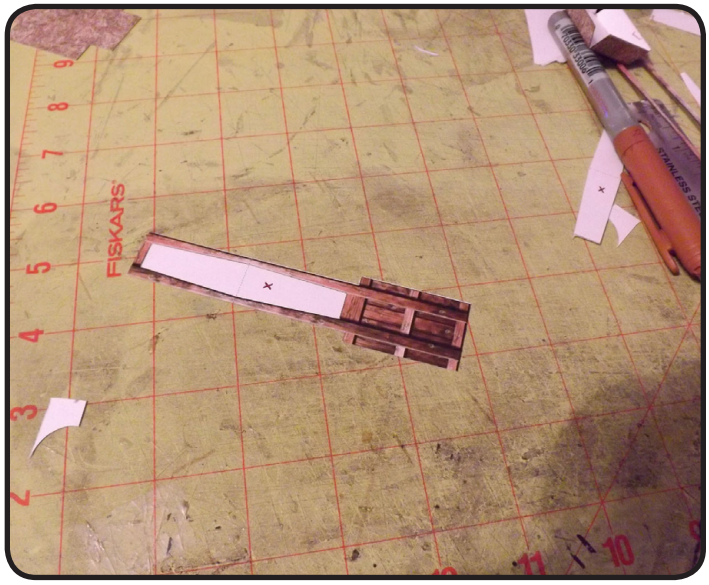
1: Cut and score the cart pieces.



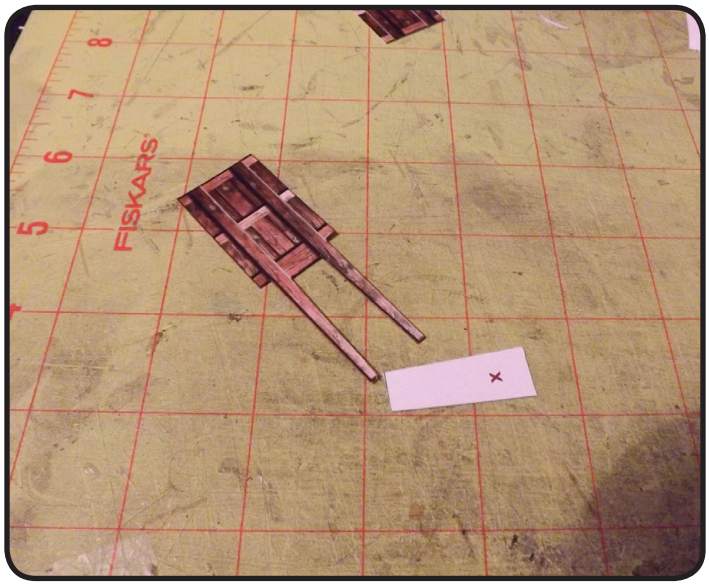
2: Fold and glue the wheel halves together. Once dry, cut away the excess white areas.



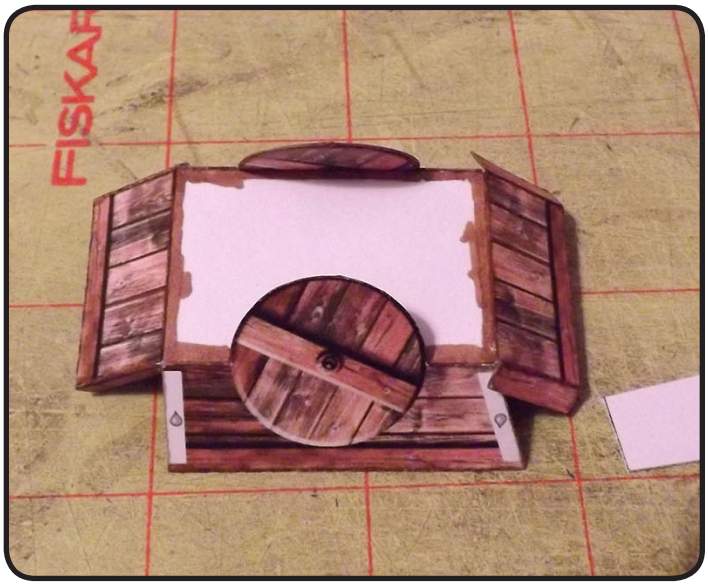
3:Fold and glue the four cart sides and allow to dry.



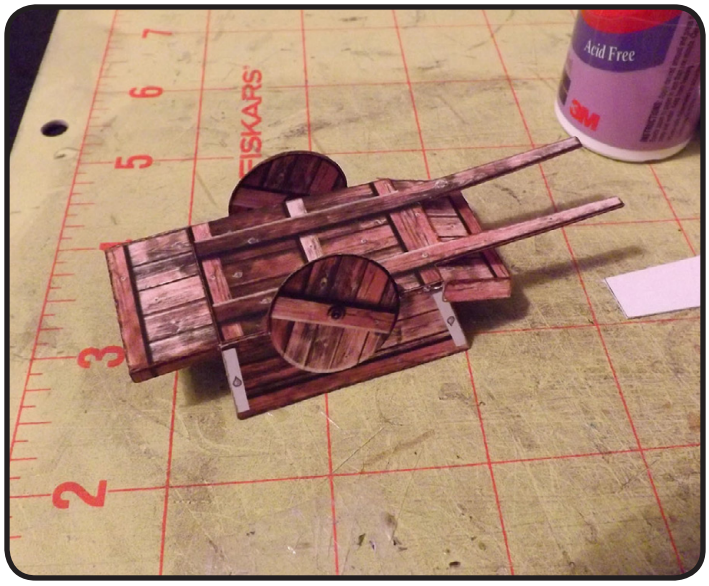
4: Cut out the bottom piece.



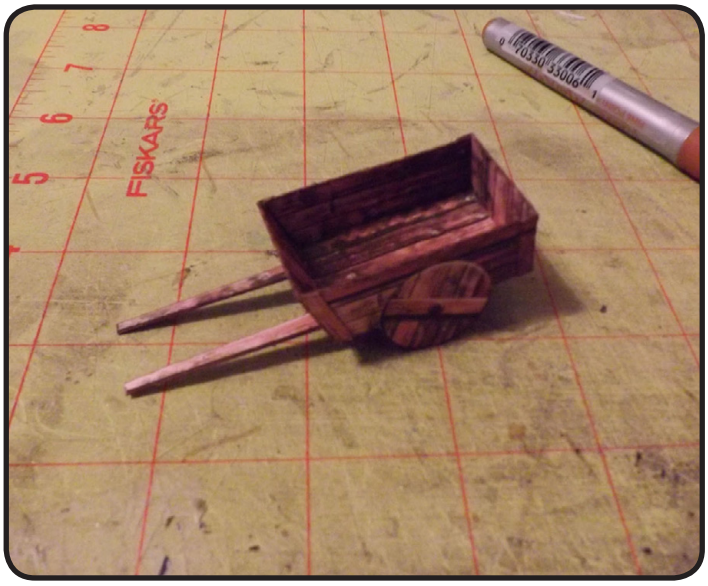
5: Fold in half and glue, and once dry cut away the center white area.



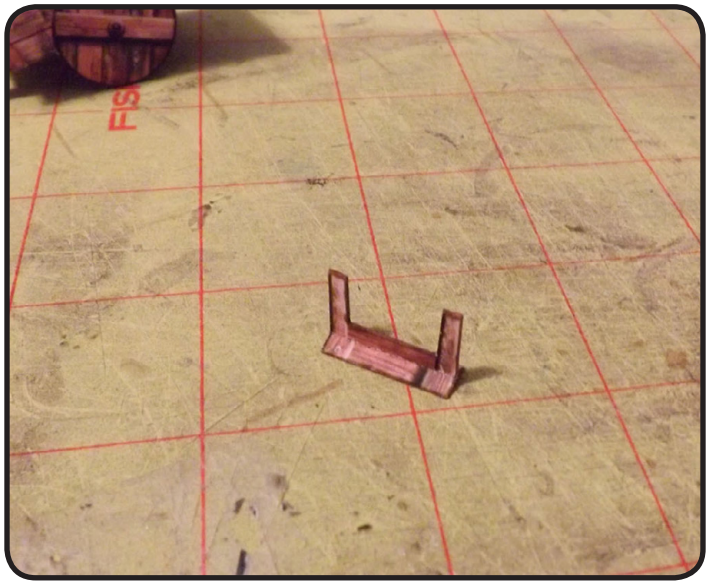
6: Edge your model if you have not already.



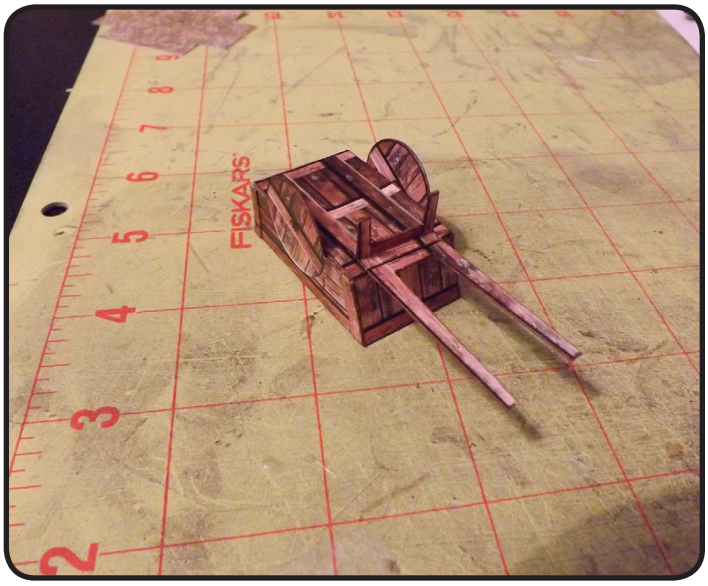
7: Glue the bottom piece in place.



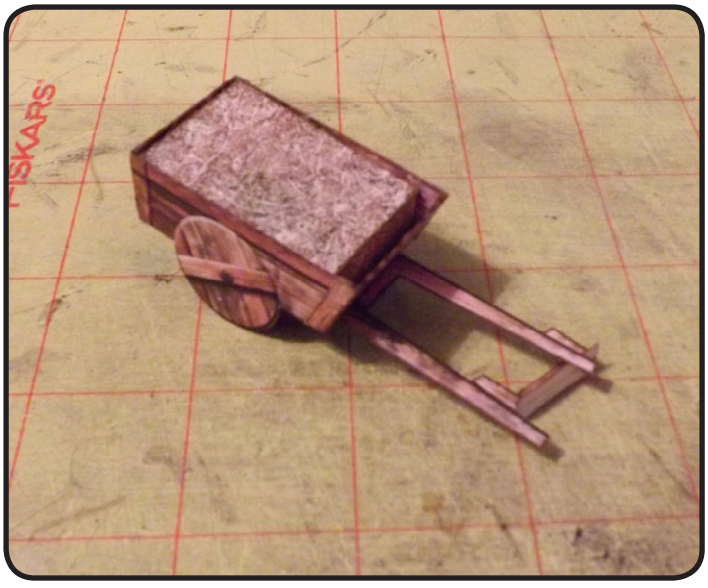
8: Finish by gluing the sides together at the corners.



9: The final piece is optional, a small stand. Fold and glue as shown.

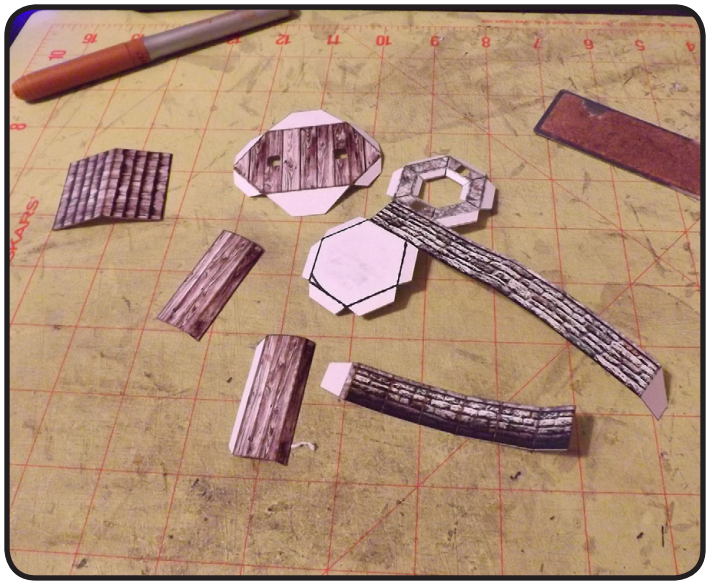


10: Glue to the bottom cart toward the front.

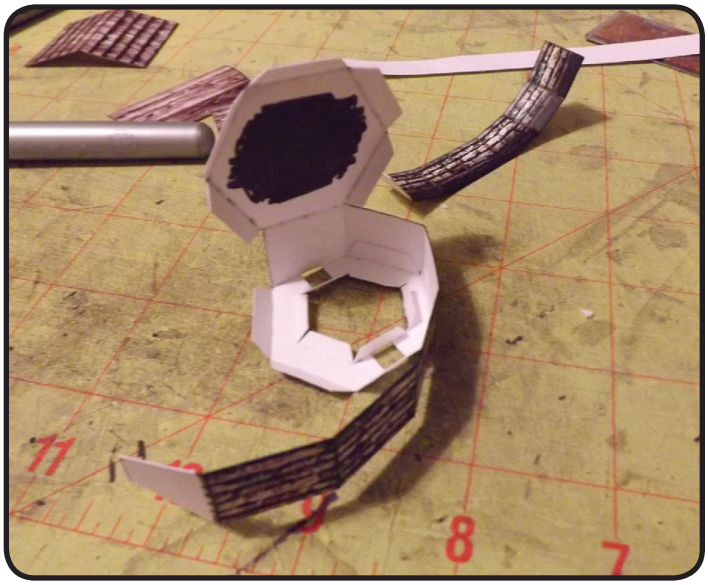


11: The hay insert does not glue into the cart, it simply pressure fits inside so it can be removed as desired.

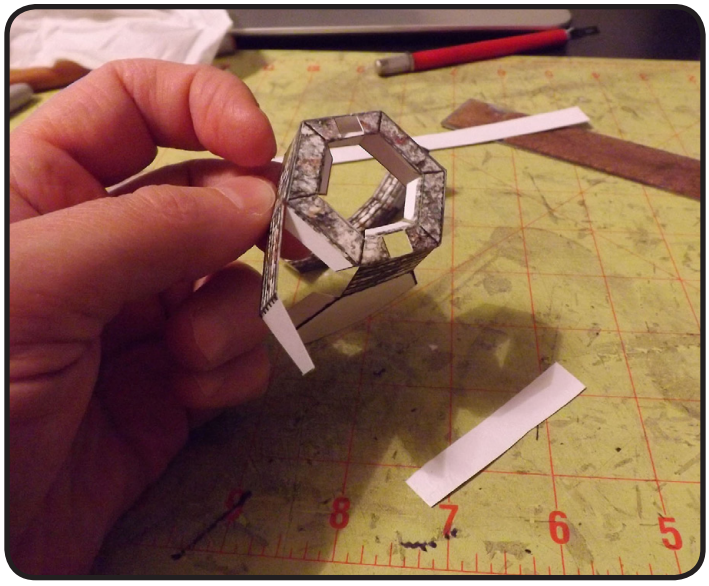
# WELL



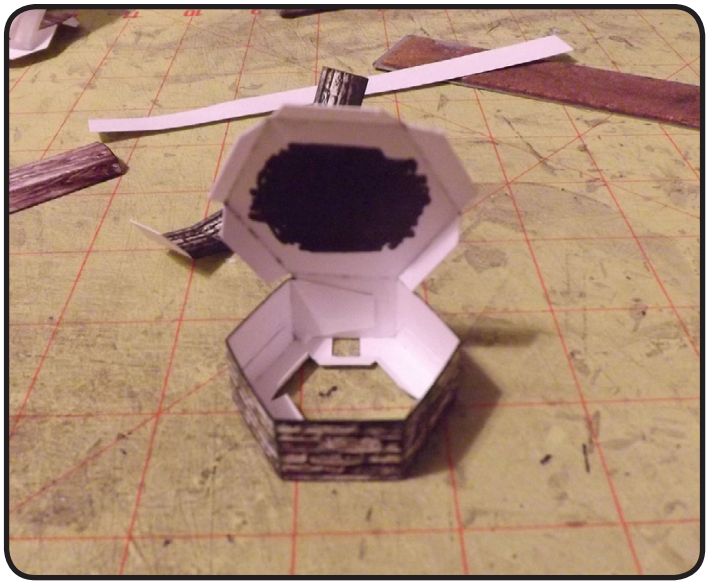
1: Cut, score and test fold the well pieces.



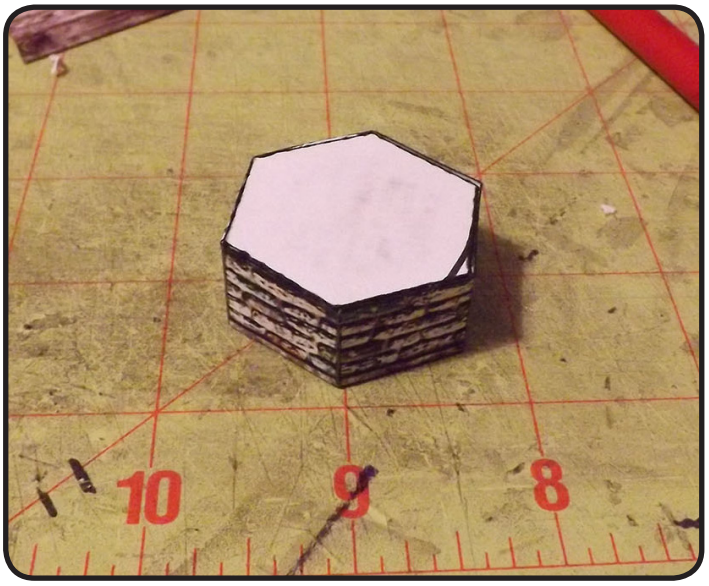
2: Begin gluing the upper flap's tabs to the side walls, one tab at a time.



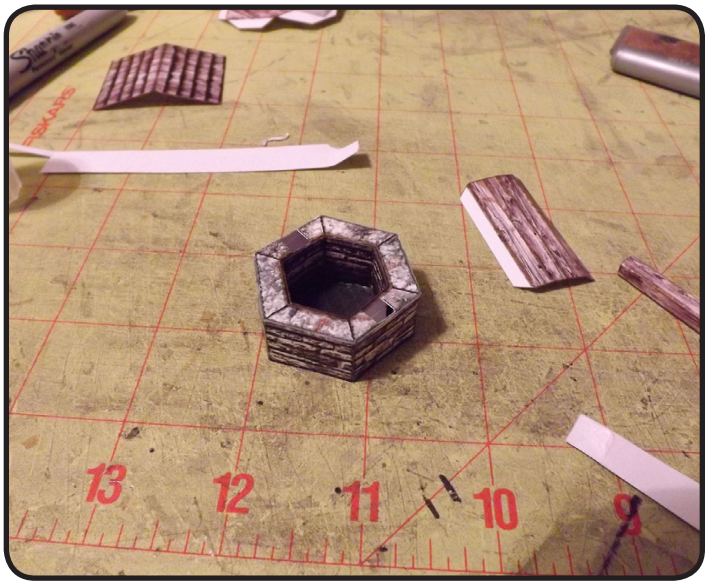
3: Continue gluing the top flap to the sides.



4: Color the interior of the lower flap black.



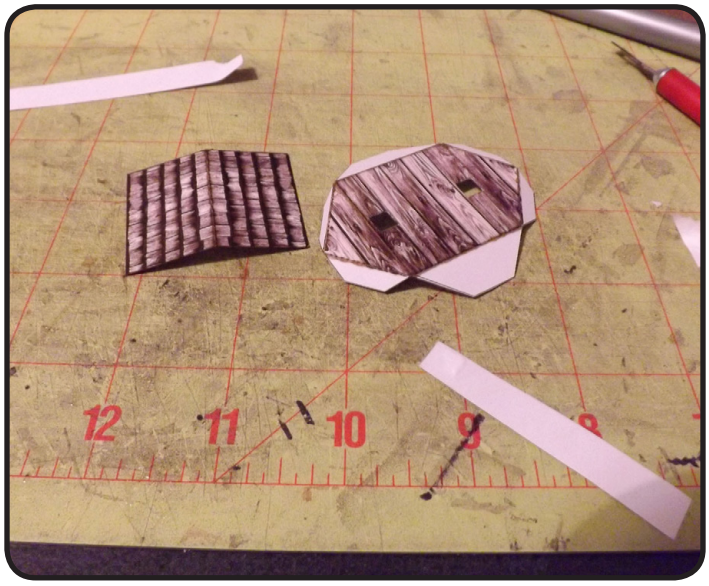
5: Finish by gluing the bottom flap into place.



6: Glue the interior wall piece into a ring, once dry insert and glue into the well model.

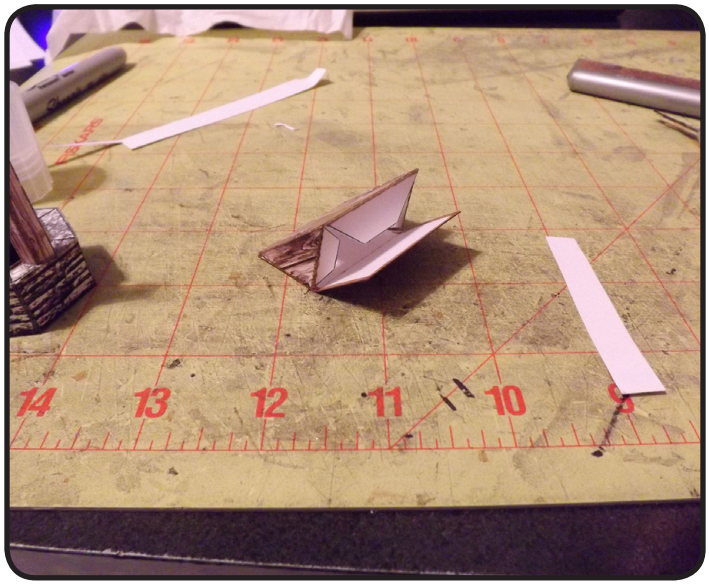
7: Fold and glue the two support posts.

8: Glue into the two openings on the top of the main well piece.



9: Cut, score and edge the roof pieces.

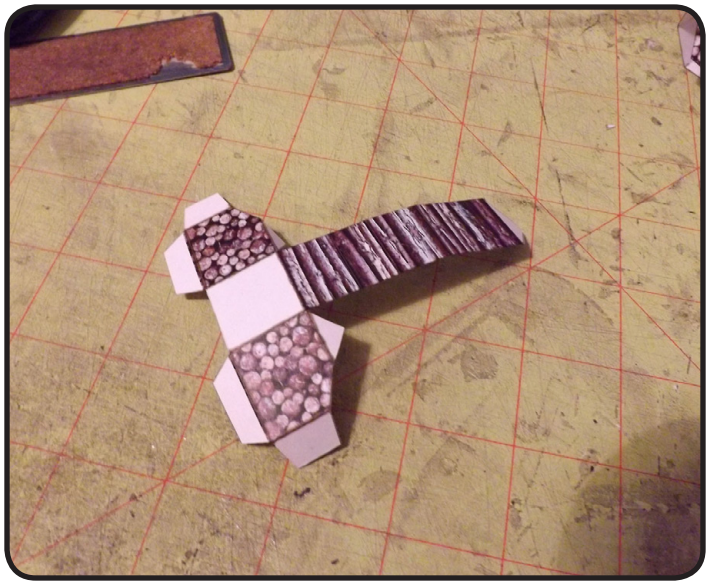
10: Glue the bottom piece to one end of the top piece as shown.



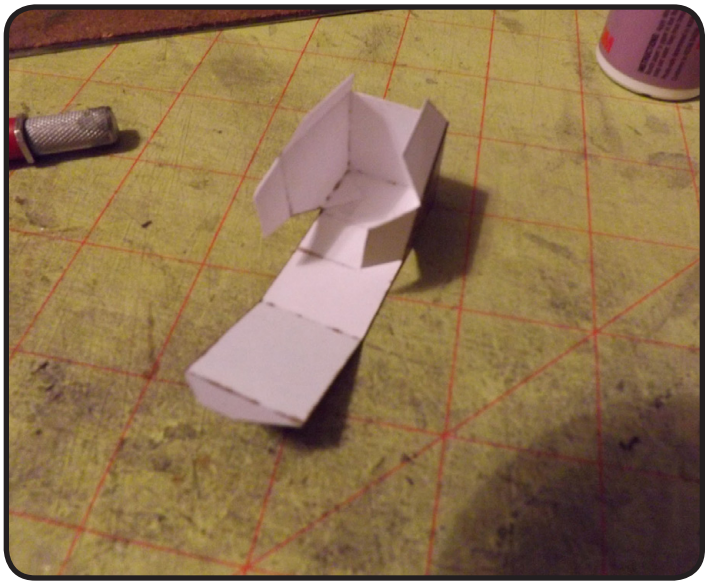
11: Glue to the remaining tabs.

12: Glue to the support posts.

# WOOD PILE



1: Cut, score and test fold the model.

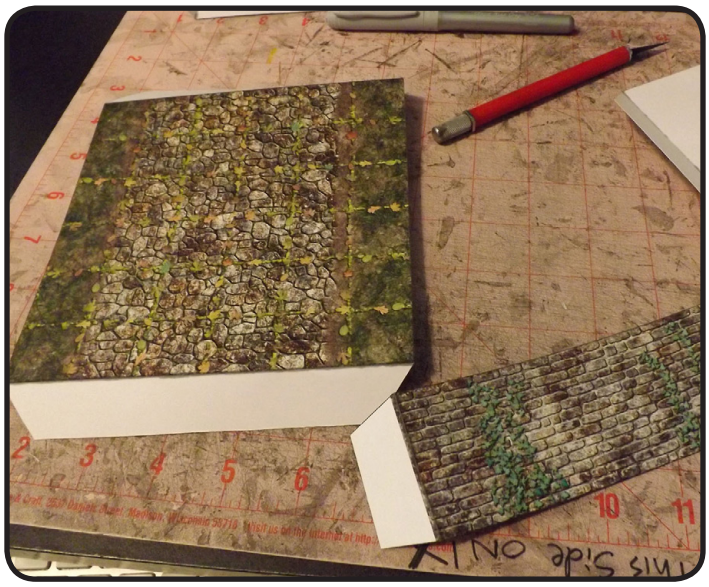


2: Begin gluing the tabs, one pair at a time.

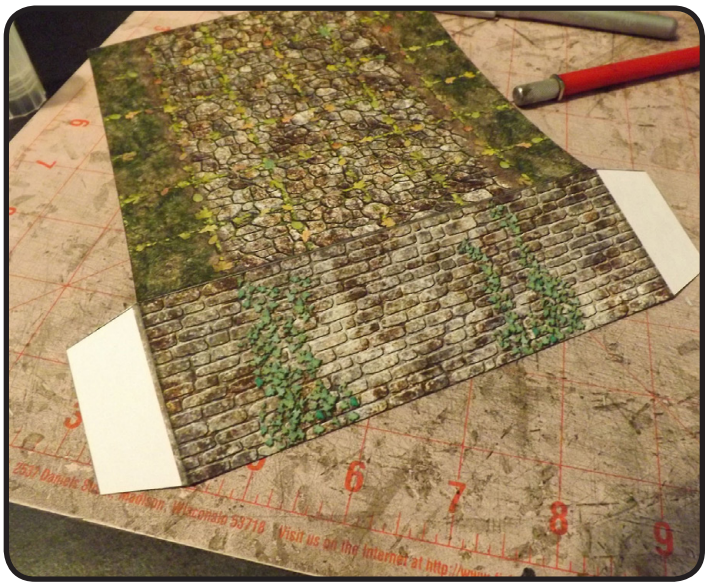
3: The finished piece.

# RAISED STREETS

PLEASE NOTE: The 6”x6” raised streets and ramps fold flat. The 6”x3” streets and ramps are BONUS models we’ve included to make your layout more versatile, and as such these optional models were not designed to fold flat due to their smaller size. Simply glue them together.

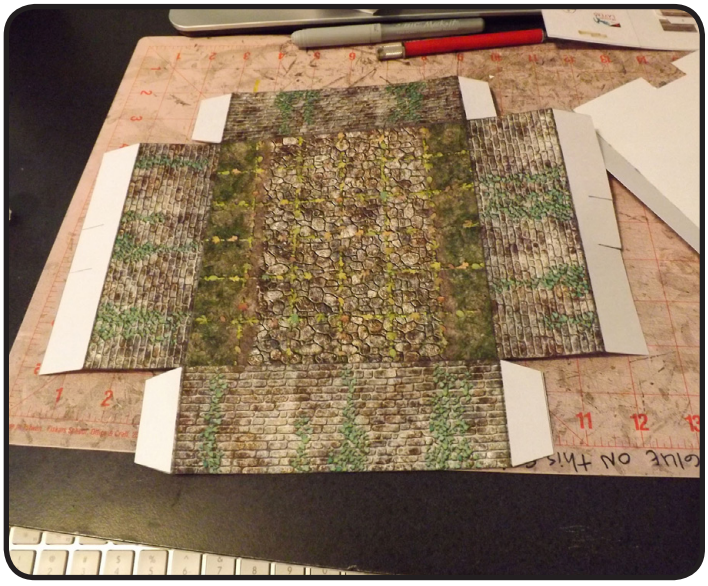


1: Cut, score and test fold the raised street pieces.

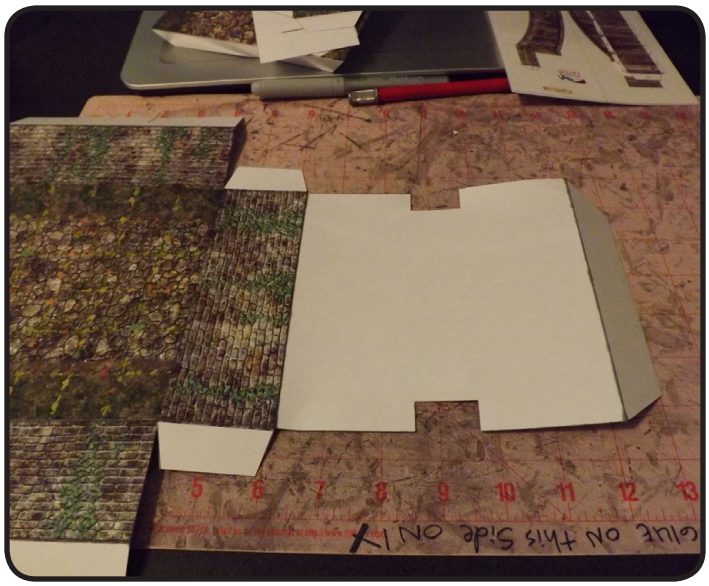


2: Glue the side pieces as depicted above.

3: Continue to glue the side pieces.

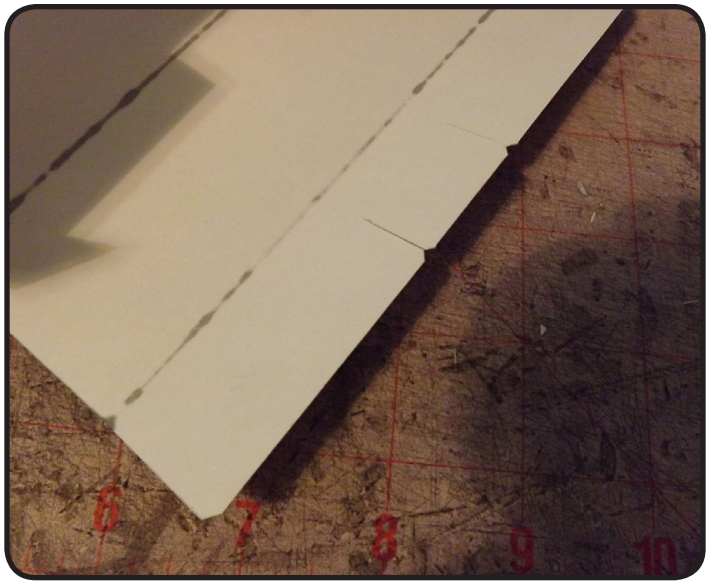


4: This is what the top section with all four sides attached should look like.



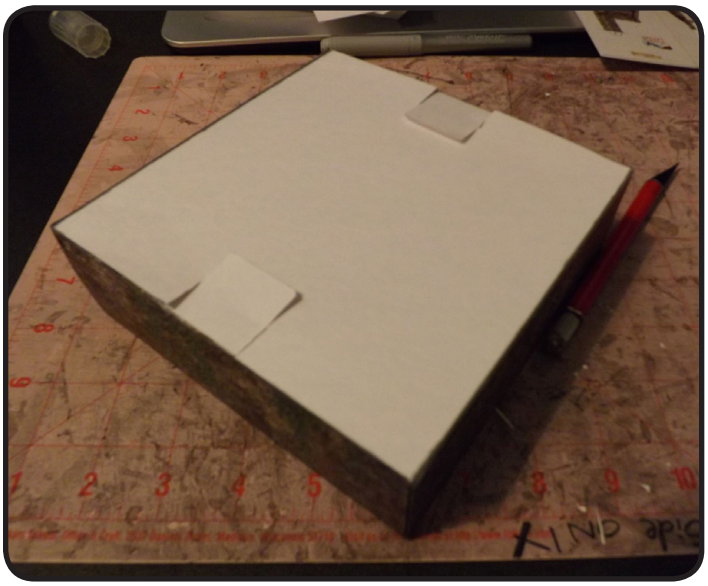
5: Glue the bottom next.

6: This is what a raised street section should look like once finished.

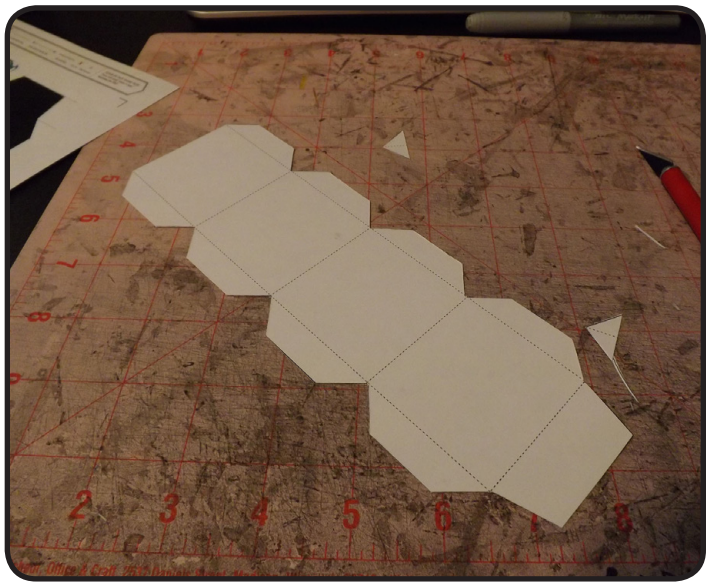


7: It will greatly aid assembly if you cut small notches at the flap corners and center tab as shown above.

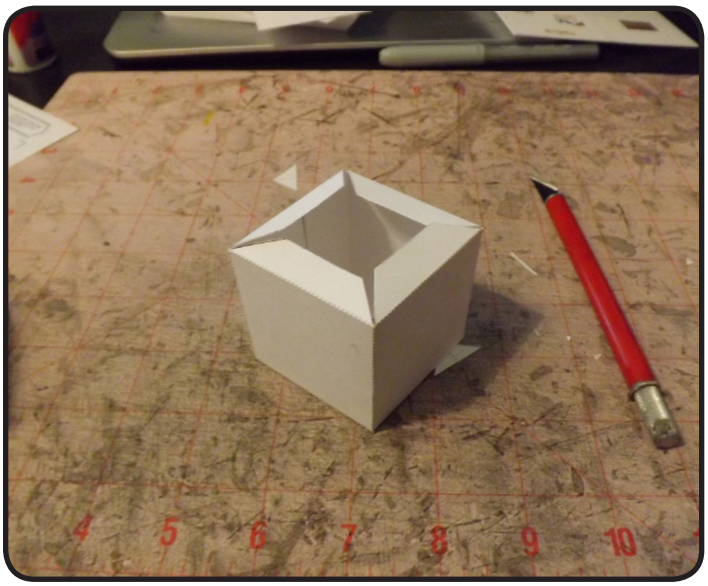
8: The completed street section.



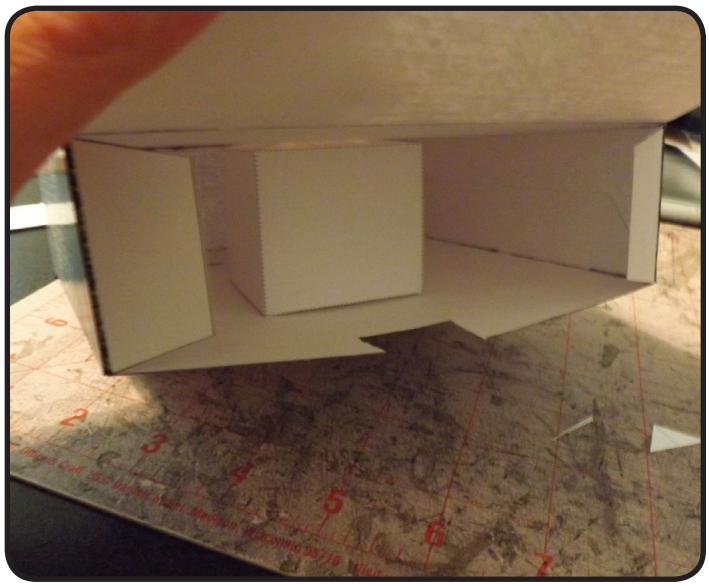
9: Fold closed, with the center tabs on the outer side of the bottom as shown.



10: To support metal miniatures, we recommend using the internal braces.

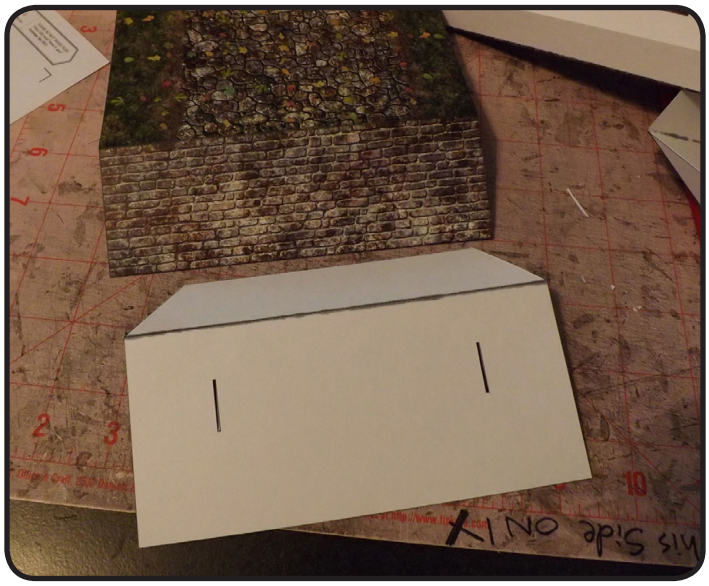


11: Fold and glue the single tab as shown. This support piece can be folded flat when not in use.

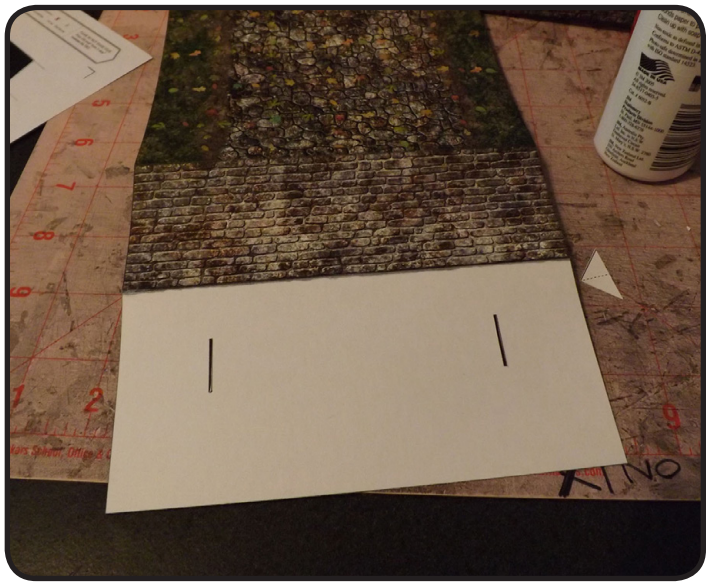


12: Simply slide the support inside the street model for use.

# SLOPED STREETS

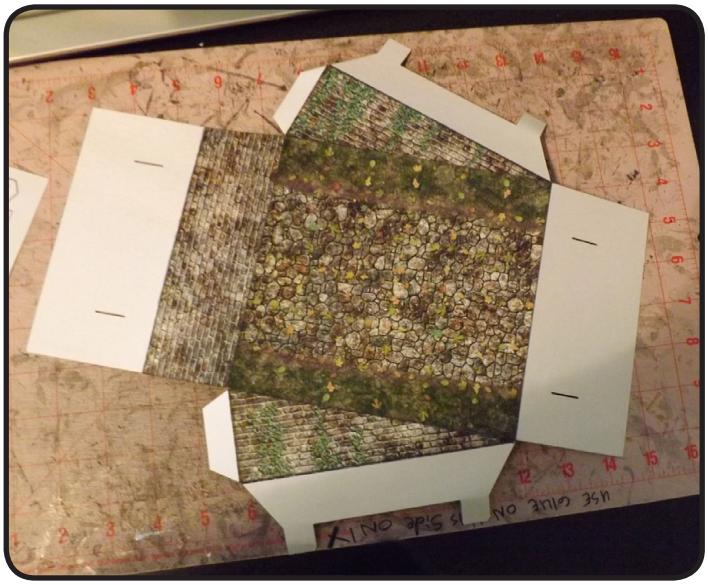


1: Cut, score and test fold the ramp pieces.

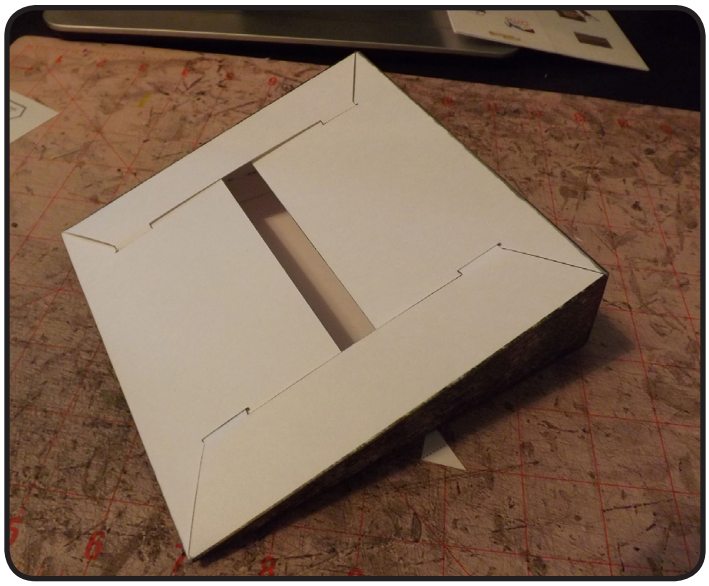


2: Glue the bottom piece to the main side wall.

3: Sometimes it helps gluing these pieces along a table edge. Glue the remaining bottom piece to the opposite end of the ramp (note that the slots are closer to the glued edge than the center of the model.)



4: Glue the triangular side walls next.



5: The side wall tabs slip into the bottom flap slots as shown above.

6: To keep miniatures from sliding down the ramp, apply white glue in lines along the grid The glue will dry clear and be virtually invisible.

# SMALL ITEMS

1: The hedges and flower beds simply fold and glue as shown.

2: The water trough folds and glues into a simple box.

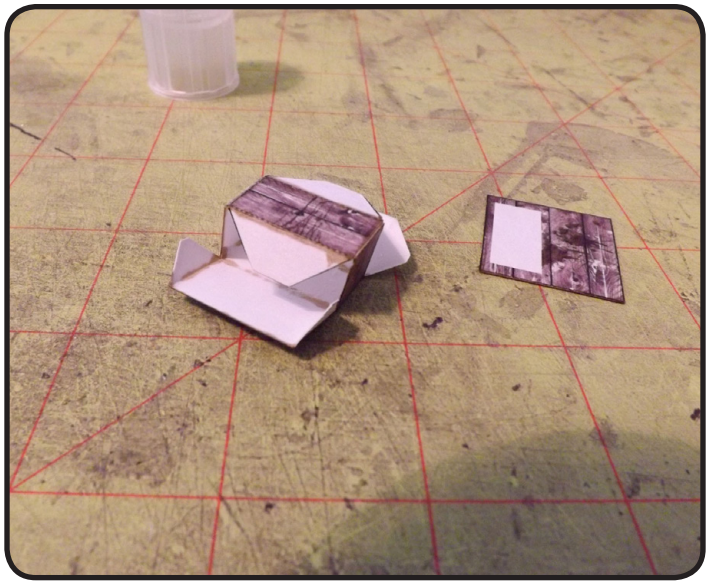
3: The archery targets fold and glue as shown, then cut away the excess white areas.

4: Cut out the ‘market cross’ model as depicted above.

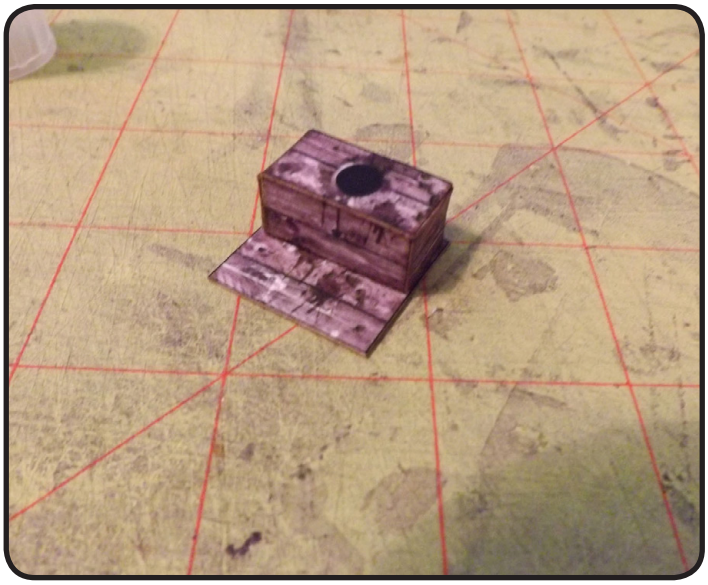
5: Glue the long side tab first.

6: Finish by gluing the top in place, then inserting the cap piece through the slot.

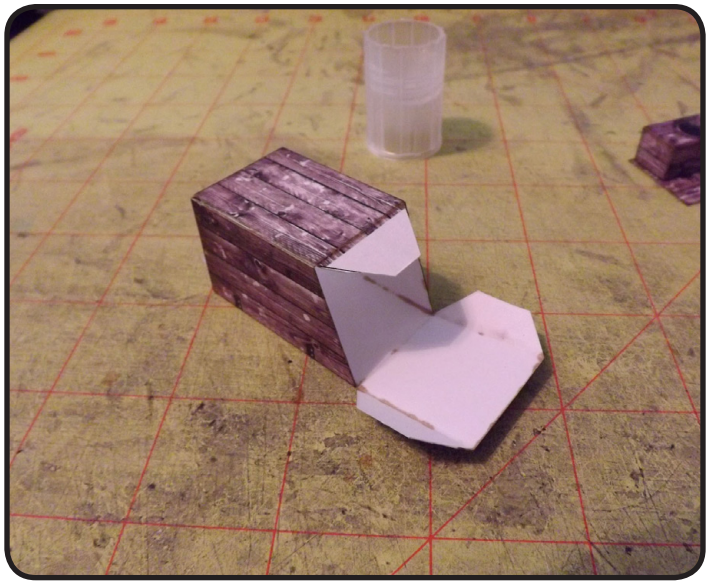
# OUTHOUSE



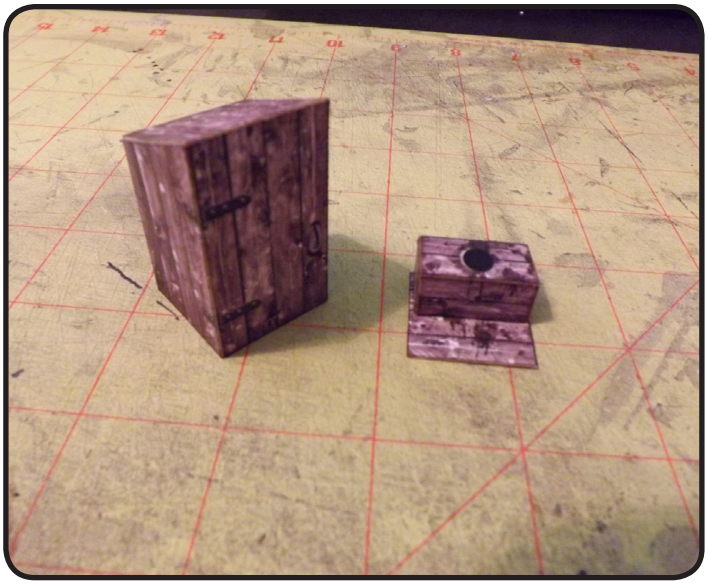
1: Cut, score and test fold the three outhouse pieces. Begin gluing the seat as shown.



2: Glue the finished seat to the floor.

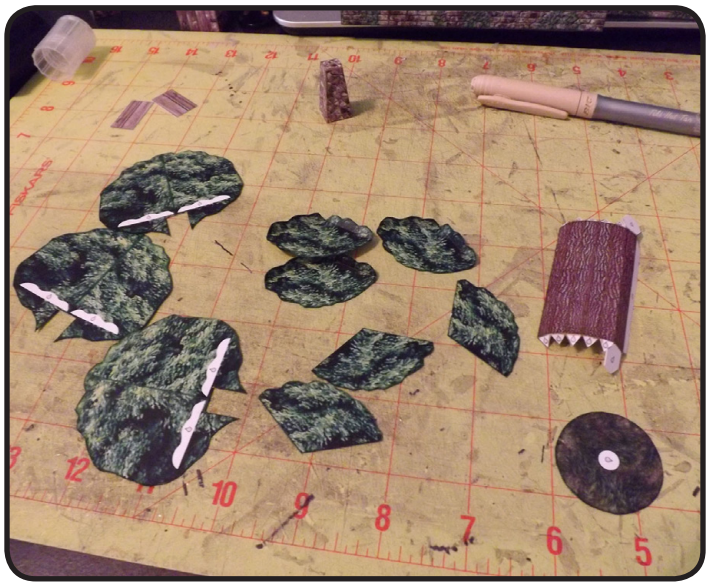


3: Glue the side tab of the outbuilding.

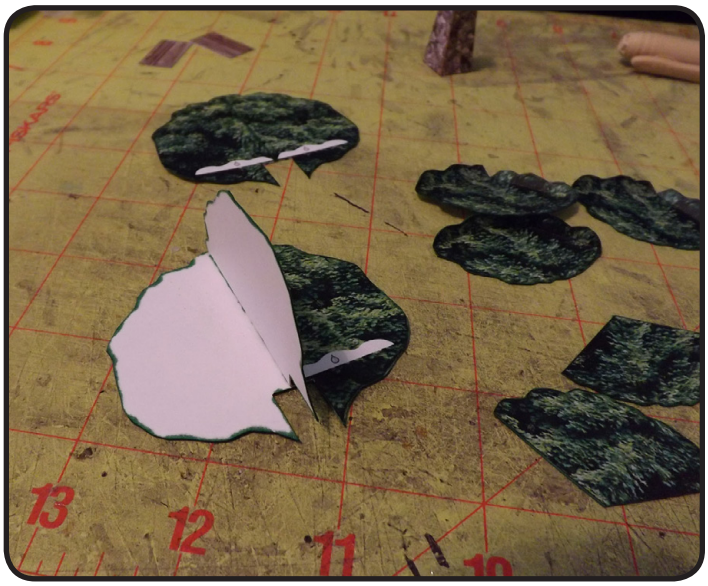


4: The finished pieces.

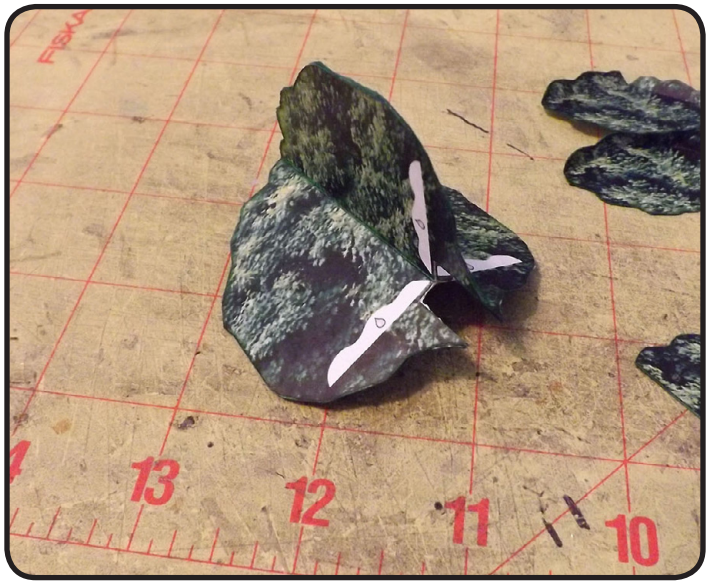
# TREES



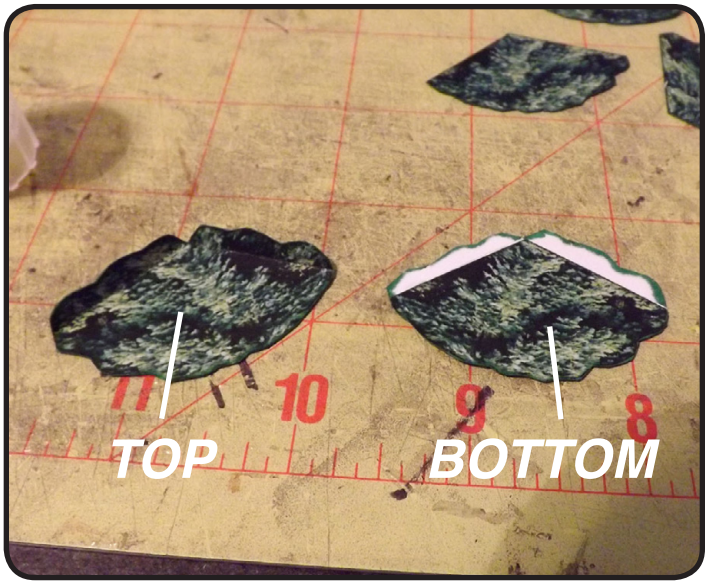
1: Cut and score all the tree pieces.



2: Begin gluing the main tree top sections as depicted above.

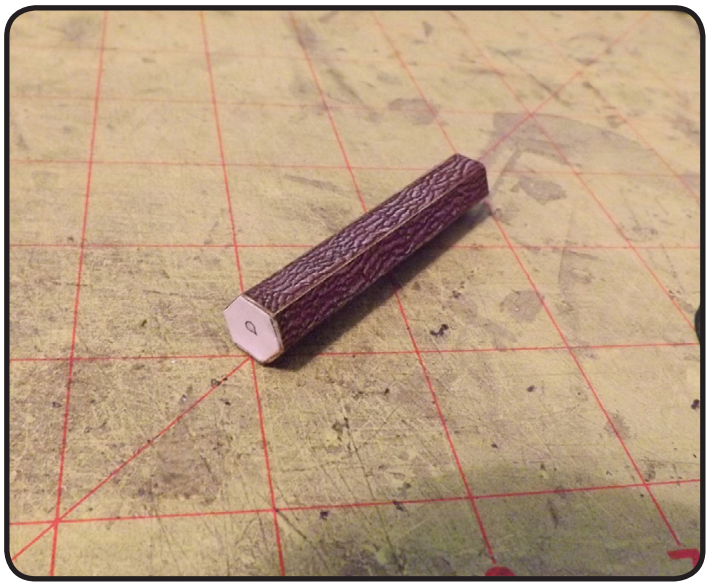


3: The three top pieces glued as one piece.

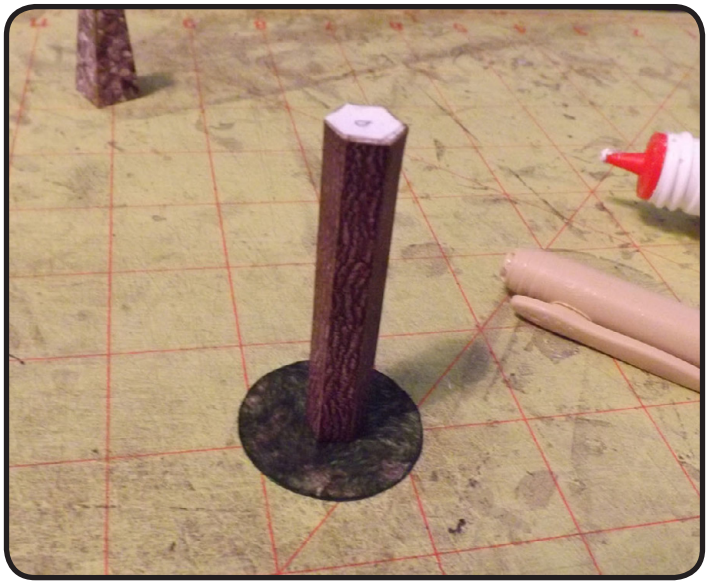


4: Glue the horizontal tree supports as shown (one wide piece with tabs glued to one without.)

5: Glue the horizontal supports to the main top piece.

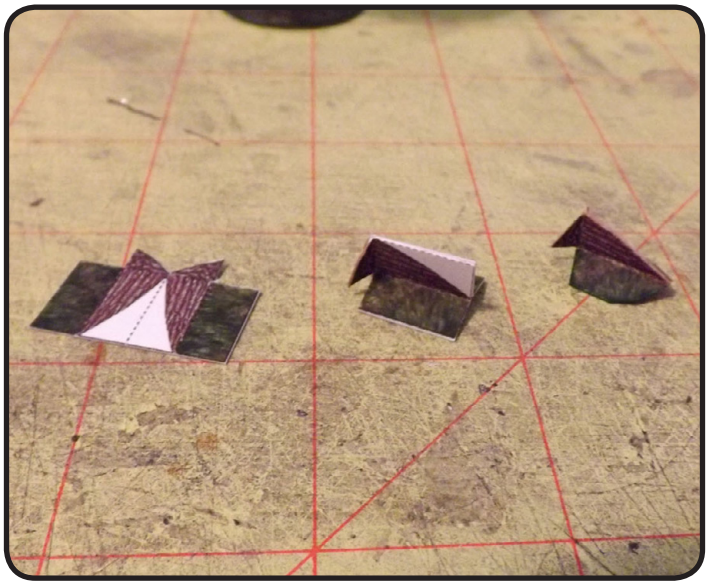


6: Fold the trunk into a tube and glue the side tab, then finish by gluing the end flaps.



7: Glue the trunk to the base.

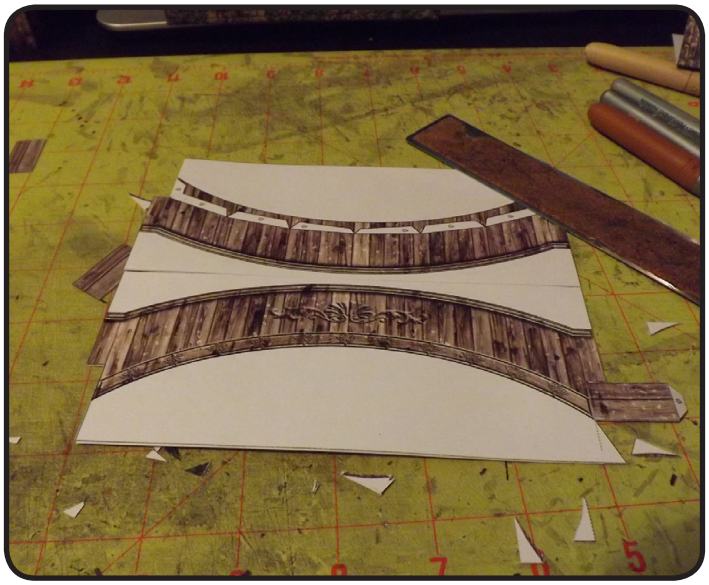
8: Insert the top piece over the trunk.



9: The trunk supports assemble as shown, fold in half, glue (being careful not to glue the tabs together), and trim the excess white away.

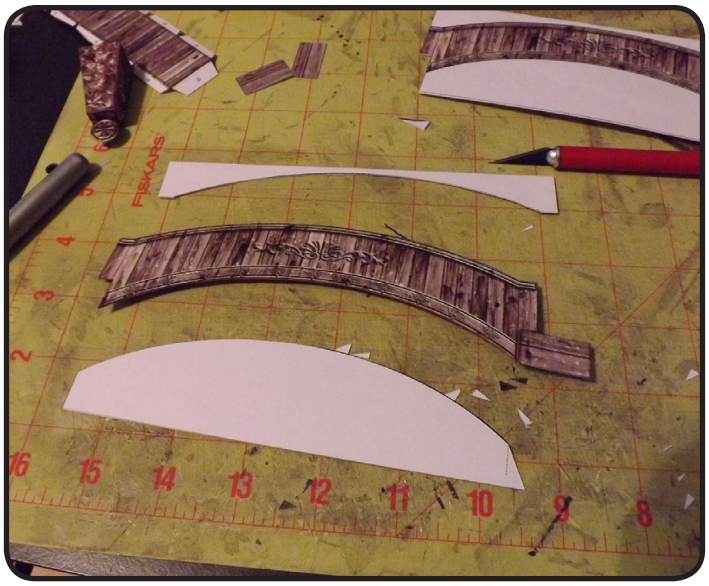
10: Glue to the trunk and base as depicted above.

# BRIDGE



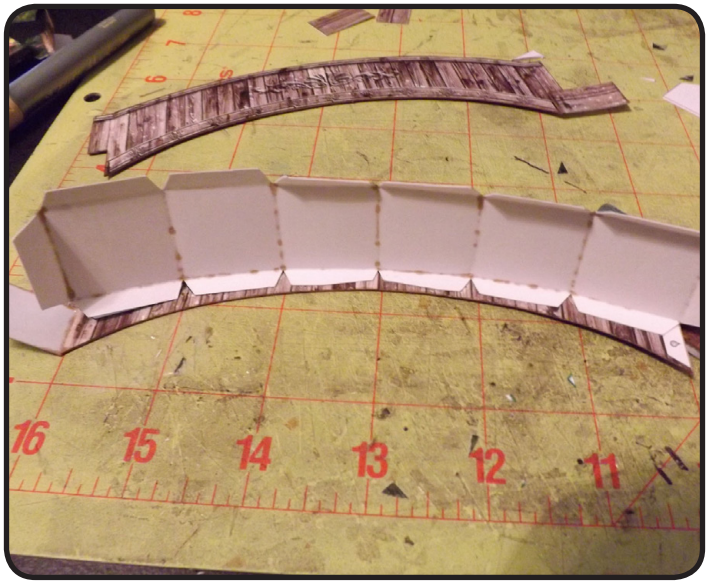
1: Cut and score the bridge pieces. BE EXTREMELY CAREFUL TO SCORE THE CENTER FOLD PRECISELY or your sides will not align.

2: Fold the side walls in half and glue.

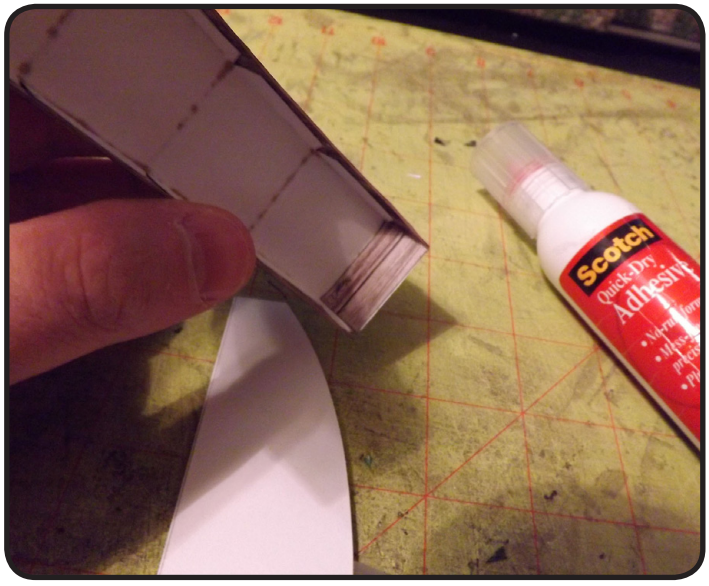


3: Cut away the excess white areas.

4: Begin gluing the center bridge section, start with a middle tab and work outward.



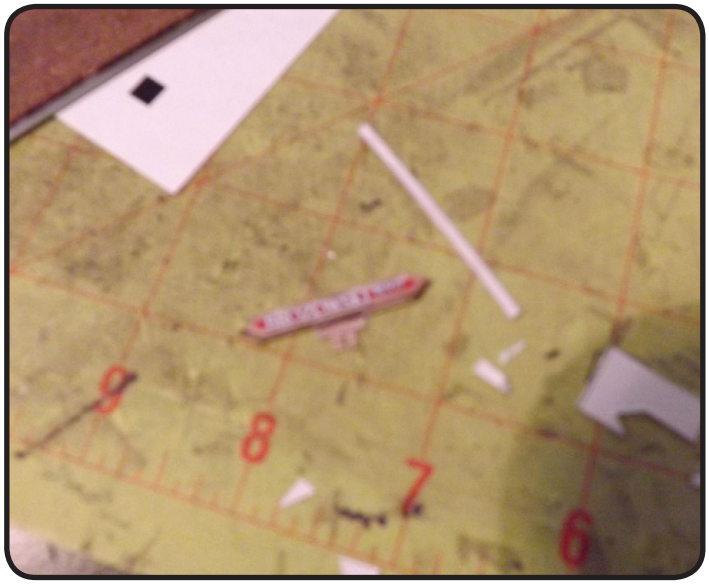
5: Finish gluing the remaining tabs.



6: Glue the small side walls on the interior ends.

# STREET SIGNS

1: Fold the street signs in half and glue.



2: Once dry, cut away the excess white areas (apologies for the blurry pic.)

3: Insert into the base (this assembles just like the market cross covered earlier.)
