

WINTERHAWK CHURCH

Before proceeding with this document, make sure you have read the beginners guide to card modeling included with this model set! All pages have user selectable options for the graphics which you can adjust prior to printing. Please see the section on 'DRAGON LAYERS' in the Beginners Guide for more info.

Main Building

1: Cut and test fold the wall supports as shown. Edge all pieces at this time with a brown or gray marker.

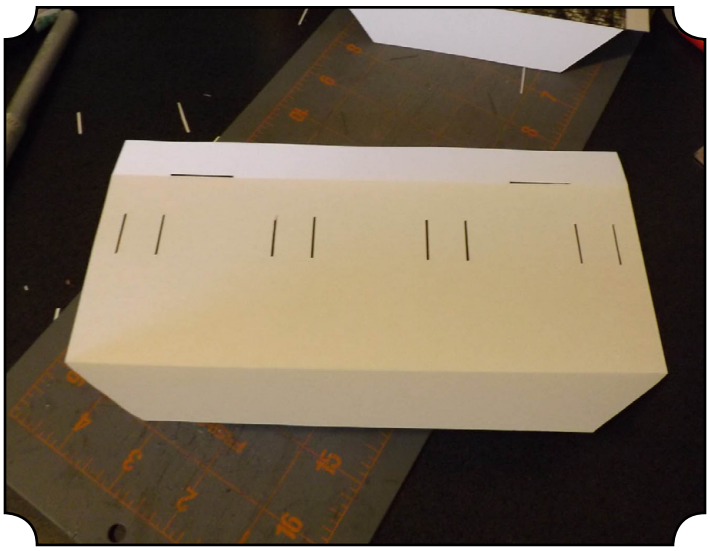

2: Glue the angled front edge first and allow to dry.

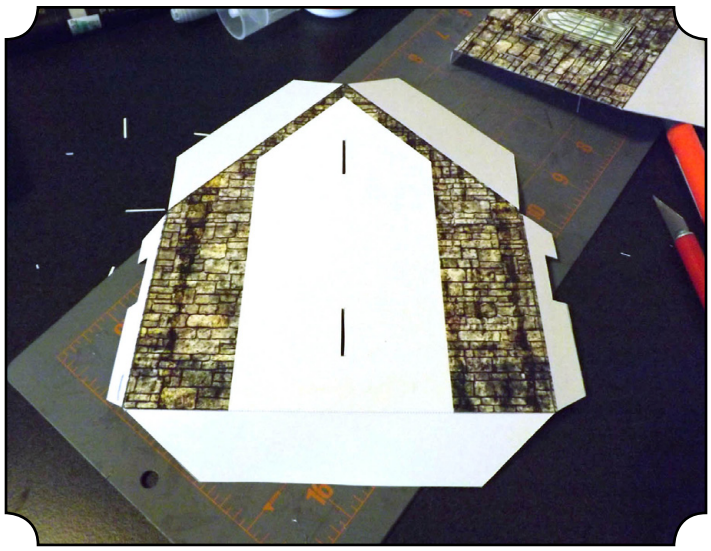

3: Finish by gluing the remaining edges.

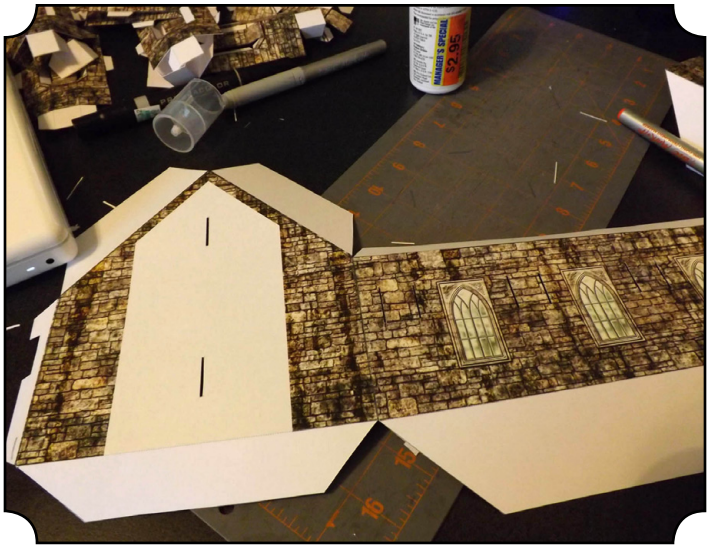

4: Cut out the church main building side walls. Make sure you cut out the 8 support attachment slots on the main wall, and the two roof slots on the upper flap.

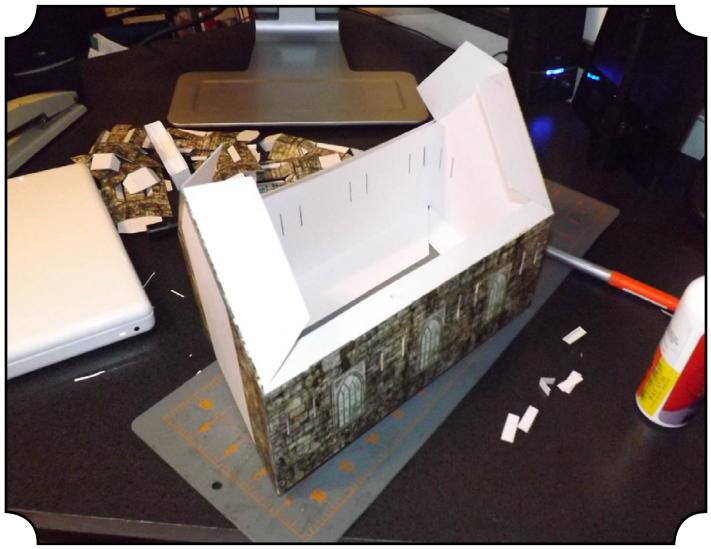

5: Here is the reverse side showing the slots better.

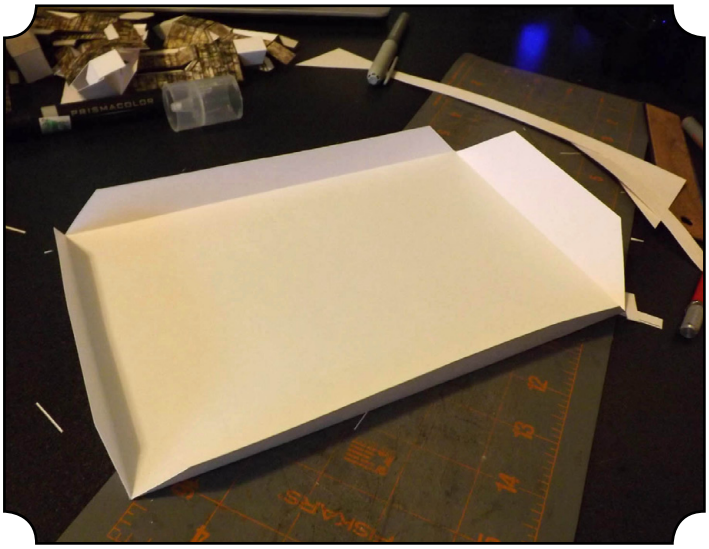

6: Cut the end walls out, one will have slots for the tower to attach to.

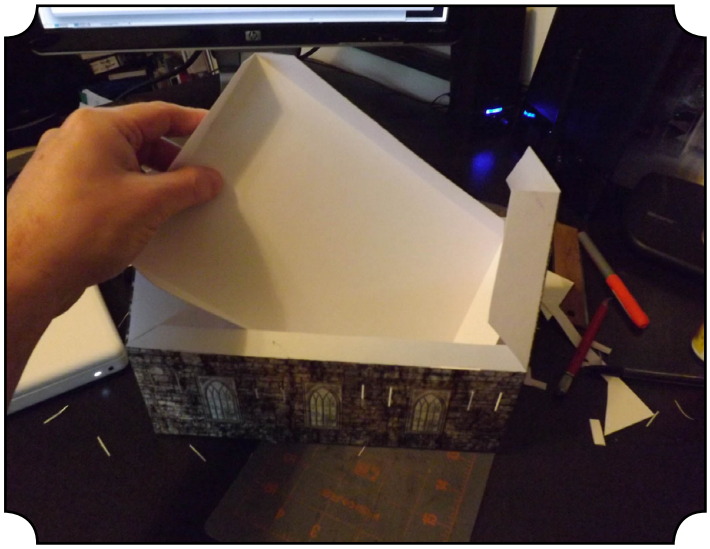

7: Glue the four walls together into one long piece and allow to fully dry.

8: Finish by gluing the two remaining wall ends together forming the final box shape.

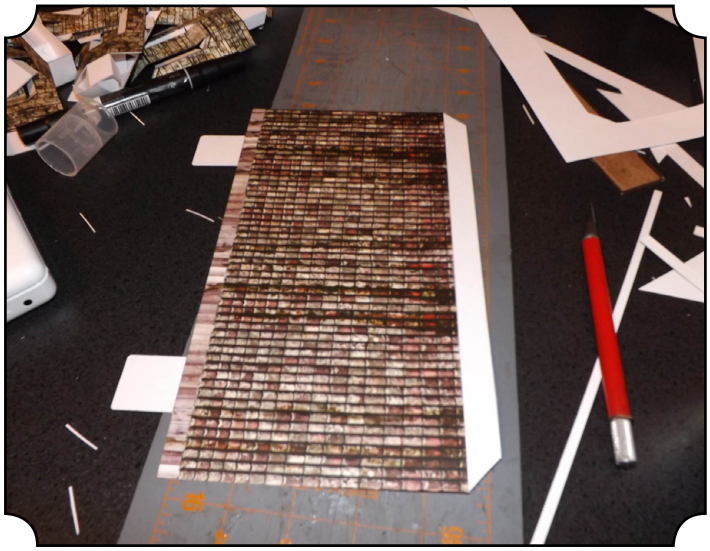

9: Cut out the internal brace.

10: Insert the brace through the roof opening and slide to the bottom. DO NOT GLUE THIS PIECE IN PLACE!

11: Another view showing the position of the interior brace and the wall supports attached.

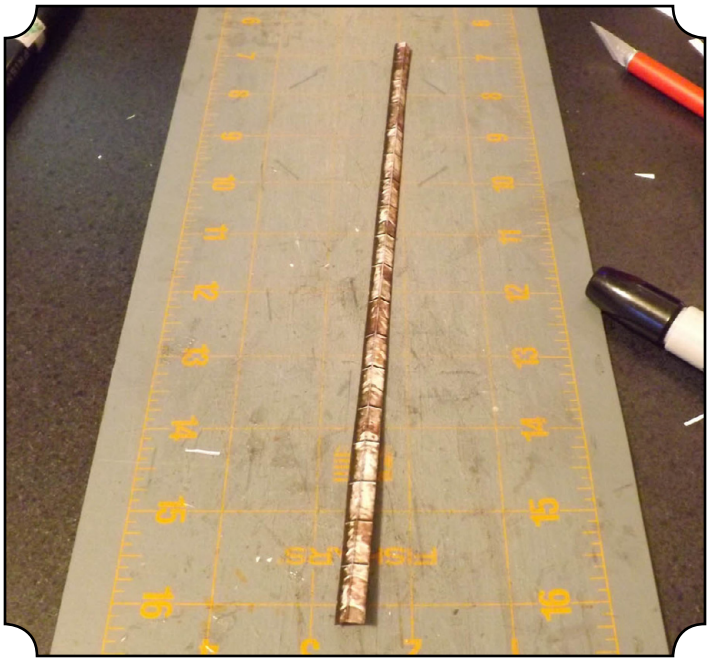

12: Cut out and score the roof sections.

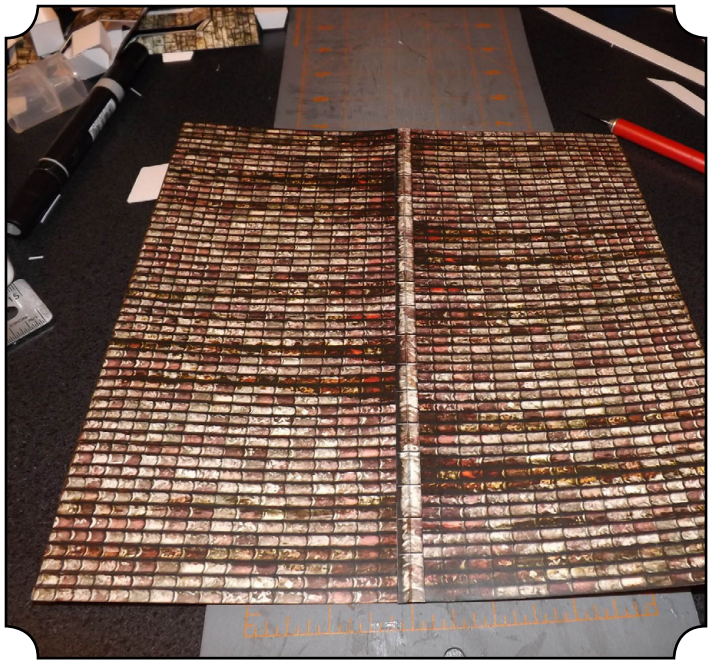

13: Fold the edge over and glue, making sure the attachment tabs are folded up so they do not get glued down accidentally.

14: Glue the two roof sides together as depicted above.

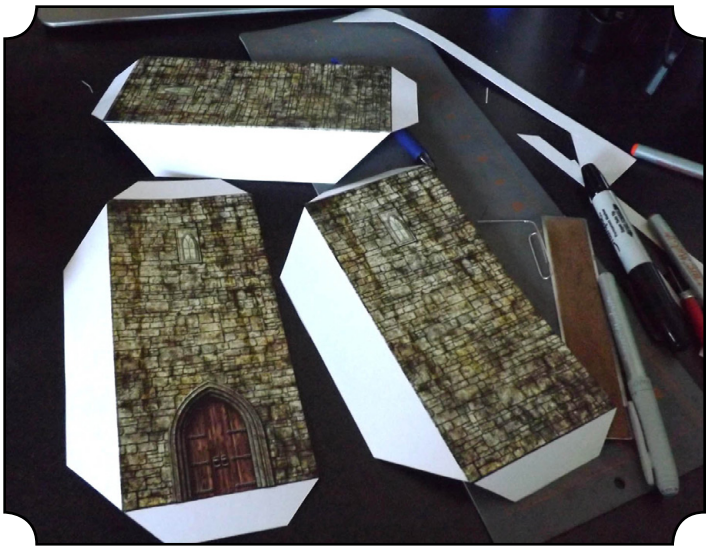

15: Cut, score and test fold the roof peak strip.

16: Glue the peak strip to the top of the roof as shown. It may help to have the roof slightly folded (more than we have in the photo above) while doing this.

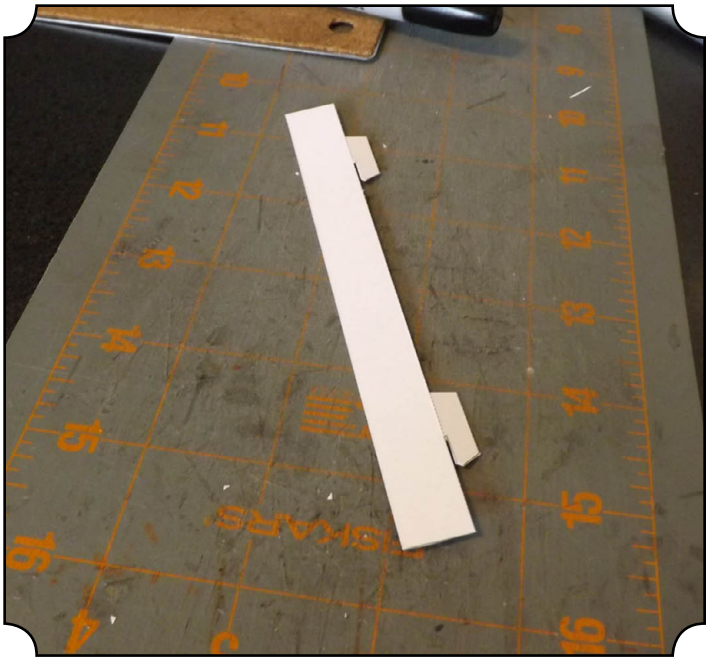

TOWER

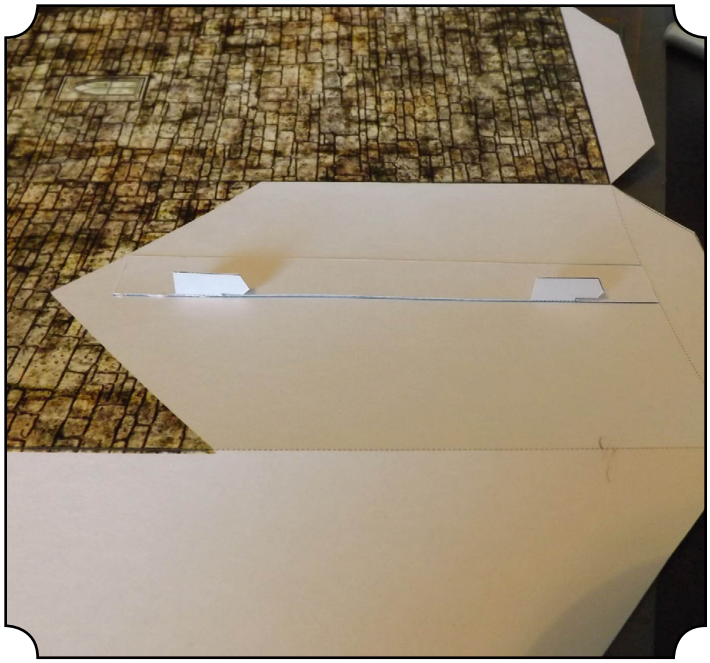

1: Cut and score the four tower walls.

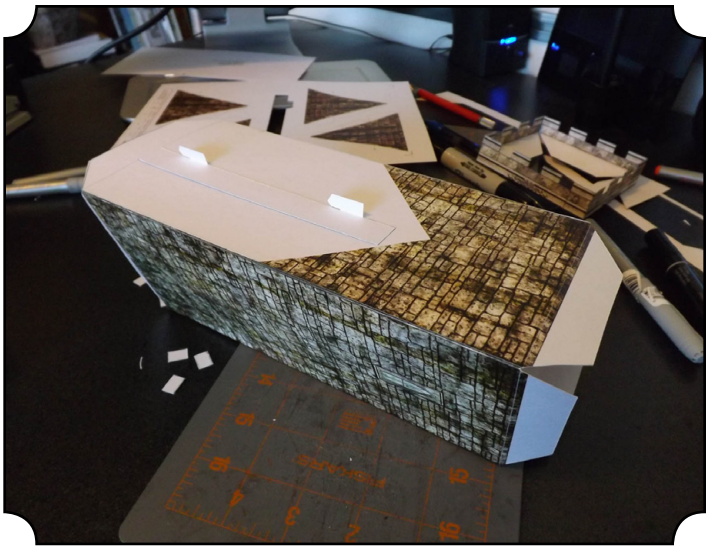

2: Glue into one long piece, making sure the front wall (with door) and rear wall (with large white area) and separated by a side wall.

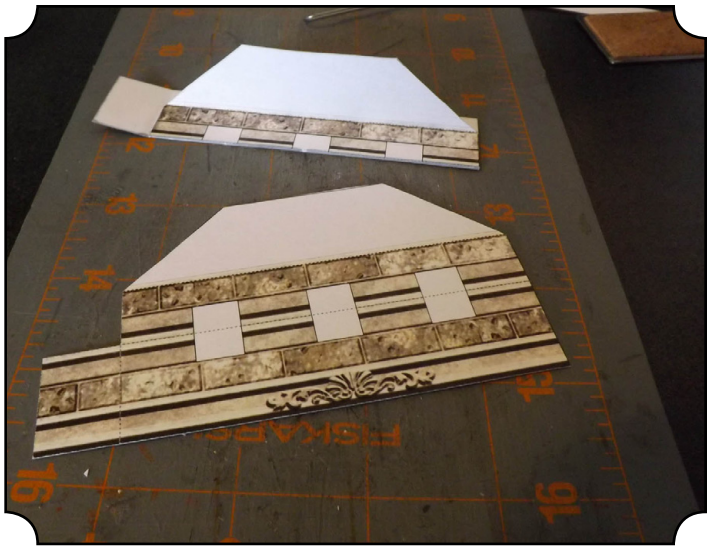

3: Cut and test fold the attachment strip.

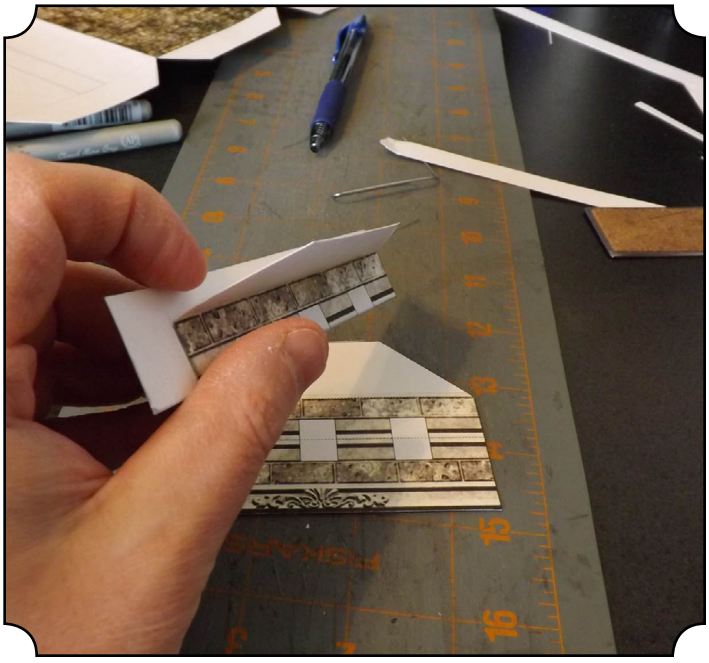

4: Glue the attachment strip to the blue outlined area on the rear wall (make sure the 'hooks' are pointing DOWNWARD.)

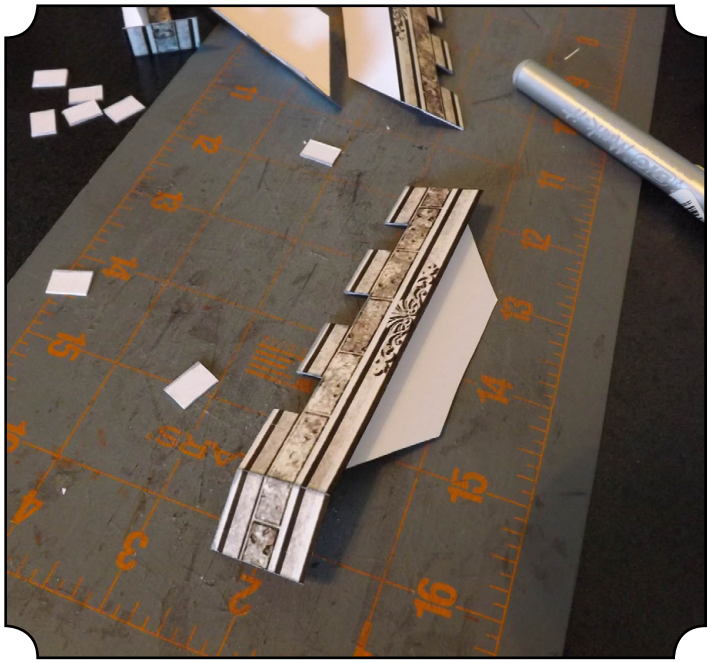

5: Glue the last two ends of the walls together.

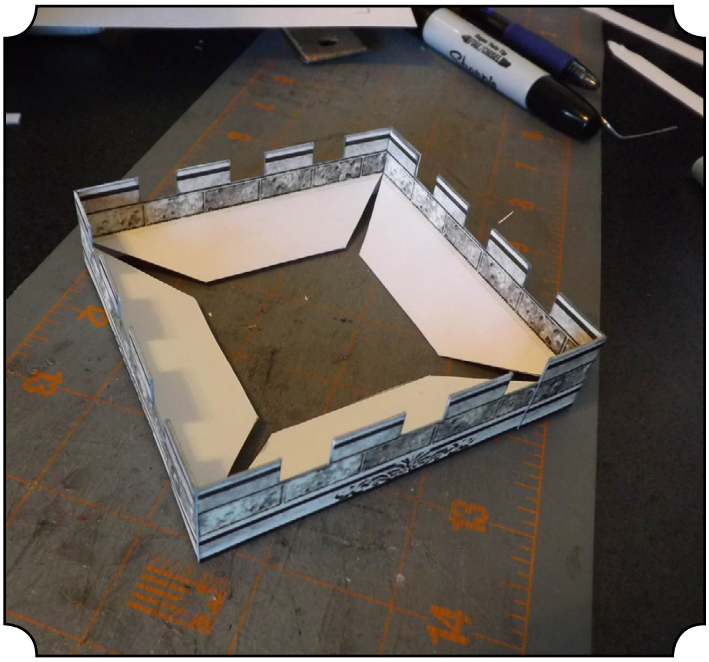

6: Cut out and score the roof cap pieces. Do not cut out the small white gaps in the middle yet.

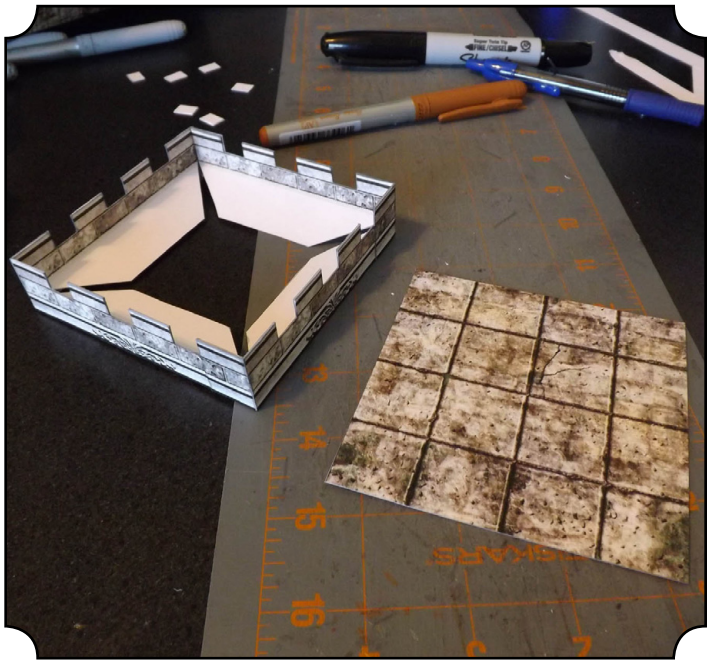

7: Fold over and glue in half, making sure the lower tab is folded outward so it does not get glued.

8: Once dry, cut away the small white gaps.

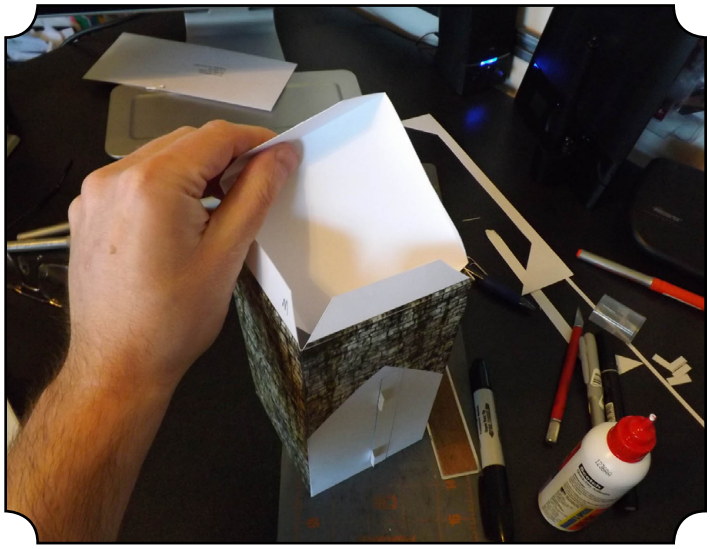

9: Glue the four side pieces together as shown above.

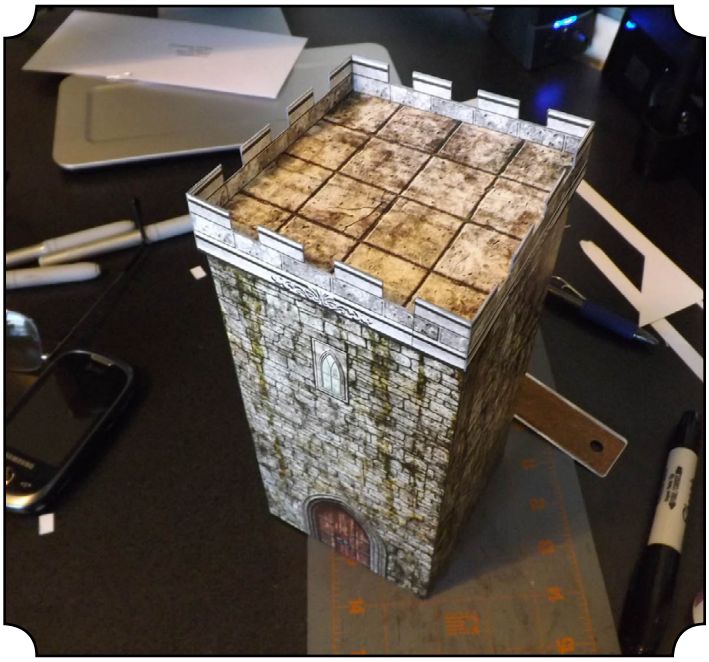

10: Cut out the roof piece.

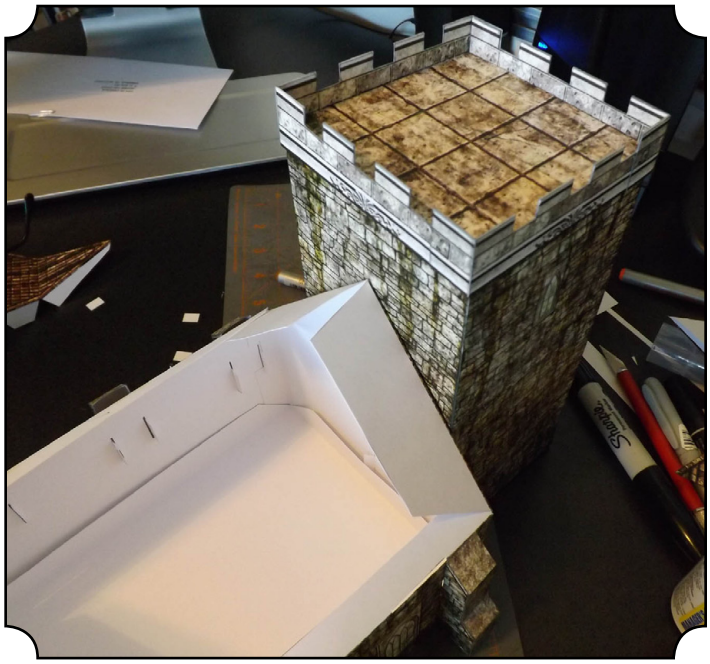

11: Glue as depicted above.

12: Insert the interior brace through the top just like the one for the main church building. DO NOT GLUE.

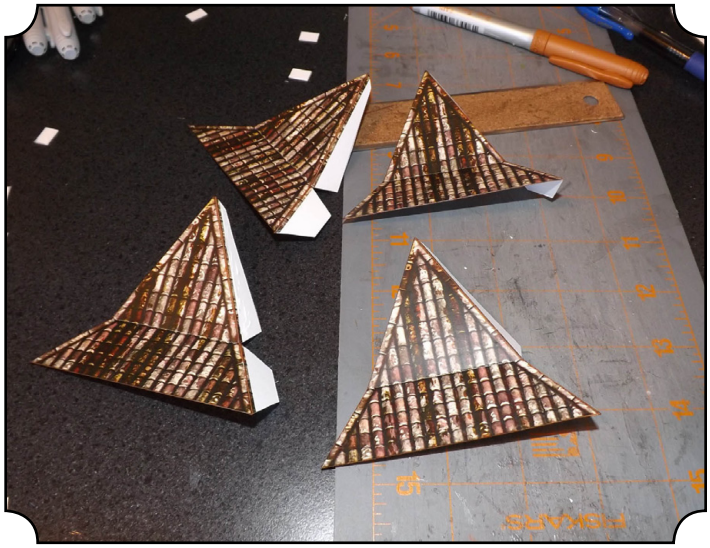

13: Add the top cap.

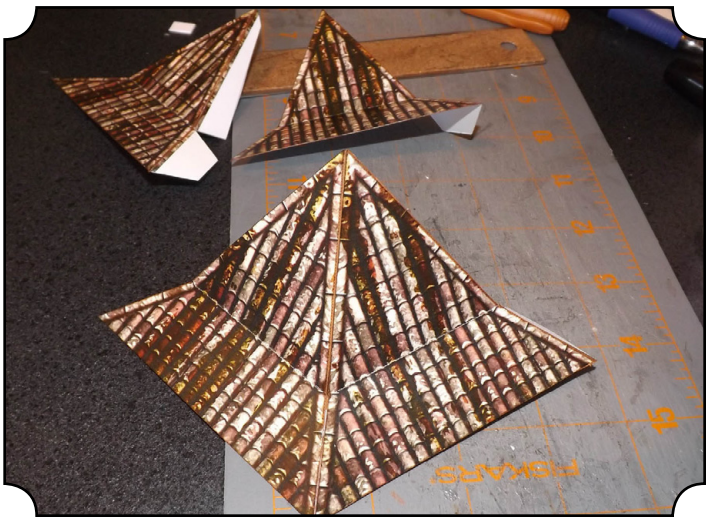

14: Attach to the main church building with the attachment hooks.

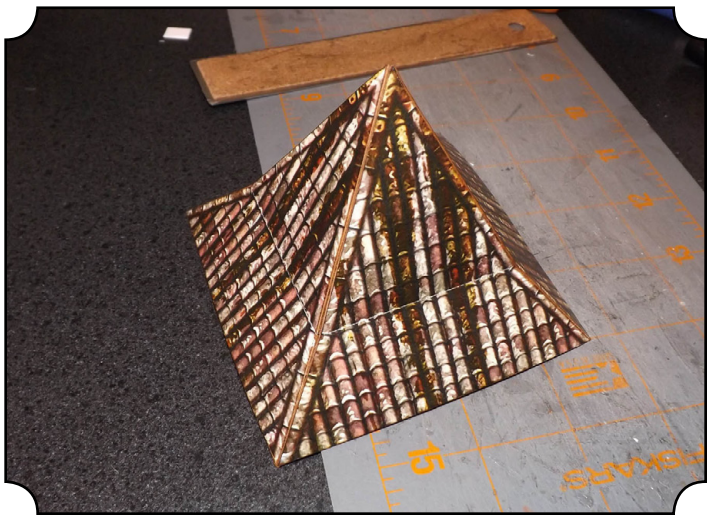

15: Attach the roof using the tabs and slots on each side wall.

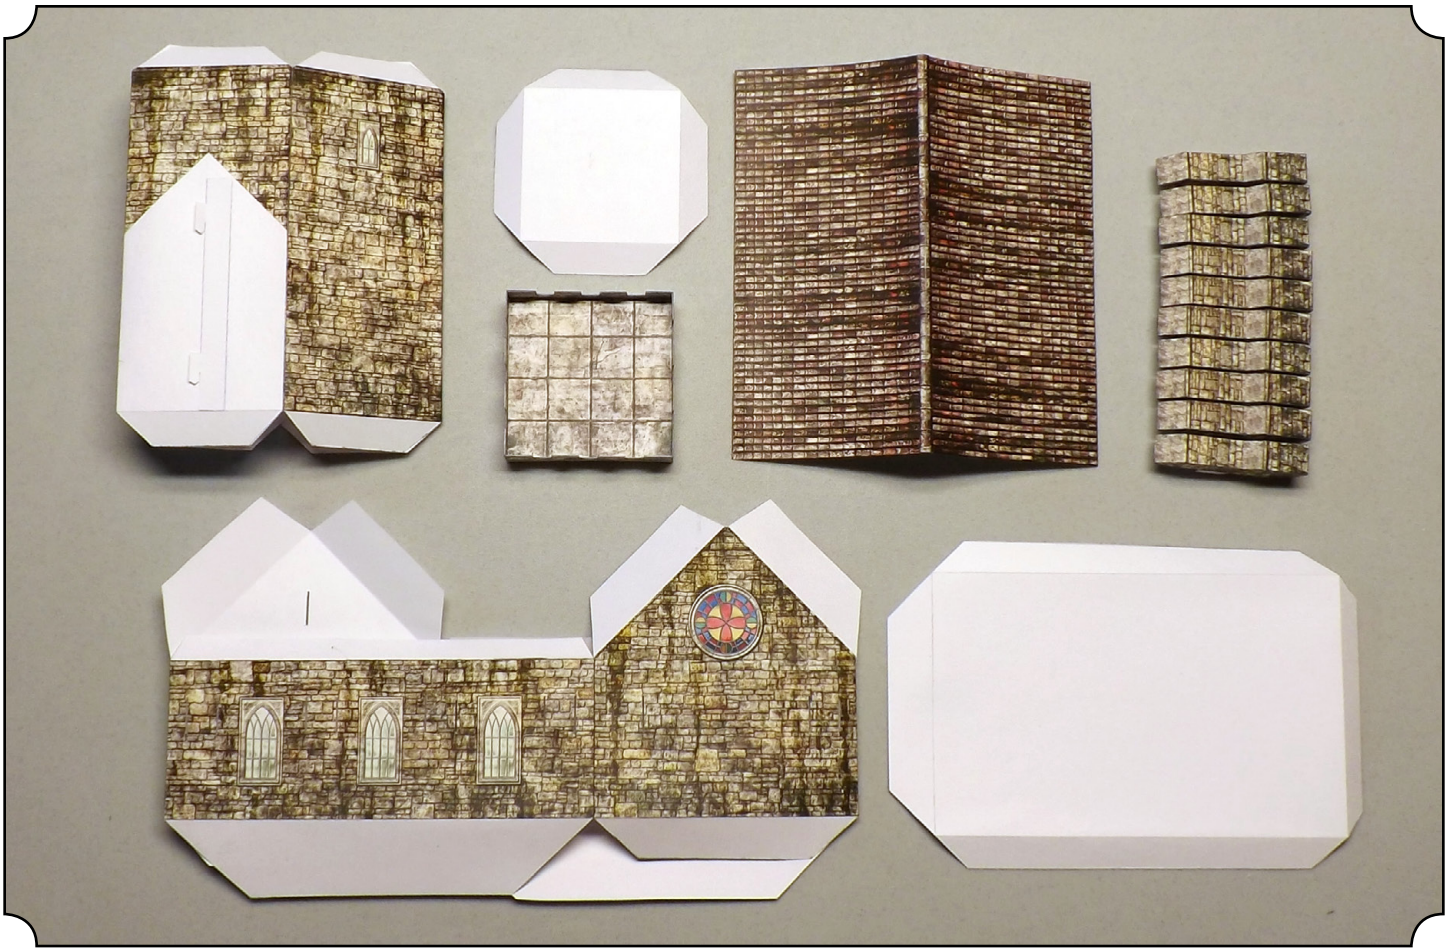

16: We have provided an optional peaked cap to go on top of the roof cap you just made. Cut out the four pieces and test fold.

17: Glue them together, one tab at a time.

18: The finished peaked cap.
